## **what is active directory authentication definition strongdm *Jun 19 2023***

kerberos is the default authentication protocol for active directory it provides authentication for clients and servers via secret key cryptography rather than transmitting a user s password over the network it instead relies on tickets for authentication kerberos generates a session key for the user which lasts for a specific period

## **administrative distance of routing protocols networks training *May 18 2023***

the routing protocols supported are the following rip ospf bgp is is igrp eigrp each routing protocol has its own administrative distance ad which is a value representing the trustworthiness of the specific routing protocol

## **active directory 101 a step by step tutorial for beginners *Apr 17 2023***

understanding the basics of active directory 3 active directory users and computers course active directory fundamentals 3 accessing active directory domain controller and rsat 4 navigating the active directory interface 5 managing users and groups in active directory 6 implementing organizational units in active directory 7

## **active directory ports used client to server *Mar 16 2023***

active directory ports used client to server active directory pro  
last updated september 10 2023by robert allen in this post i will  
explore the tcp and udp ports used by active directory from client  
to server i will use wireshark and a series of tests to determine  
what ports are used tests i ll be running

## **administrative distance ad explained computernetworkingnotes *Feb 15 2023***

in simple words administrative distance ad is a scale the router  
uses to measure the trustworthiness of a source that provides  
routing information the following table lists the default ad value  
of some most common routing sources if required you can change  
default ad values

## **communication protocol between the ad control server and the *Jan 14 2023***

communication protocol between the ad control server and the ad  
edge router of source address validation architecture external  
sava x abstract because the internet forwards packets according  
to the ip destination address packet forwarding typically takes  
place without inspection of the source address and malicious  
attacks have been launched

## ***alert disney changes arrival protocol***

## ***new policy affects Dec 13 2022***

alert disney changes arrival protocol new policy affects all incoming guests disney has just altered their entry policy for european hotels and theme park guests when guests visit walt disney

## **guidelines for the use of rid adr adn 5 4 0 2 introduction Nov 12 2022**
