originally published in 1962 the experimental study of aesthetics was a field particularly associated with the name of c w valentine who in this book provided a critical review of research carried out since the end of the nineteenth century principally by british and american psychologists the investigations described many of them conducted by the author are concerned with individual responses to what is commonly regarded as beautiful in painting music and poetry an important distinction being made between the perception of objects as beautiful as opposed to pleasing the reactions of children and adults and of people having different ethnic and social backgrounds are explored in a variety of experiments dealing with specific elements including colour form and balance in painting musical intervals discord harmony melody and tempo and rhythm metre imagery and associations in classical and romantic poetry other experiments seek to disclose the temperamental and attitudinal factors underlying individual differences in the judgement and appreciation of specific works of art of particular interest are the studies of responses to modern paintings poems and musical compositions the findings throw light on the development of discrimination and taste and suggest the possibility of some common factor in the appreciation of these three arts it was felt that critics as well as psychologists and aestheticians would find much to encourage reflection and to stimulate further research

pictures are a medium that helps make the past tangible and preserve memories without context they are not able to do so pictures are brought to life by their associated stories however the older pictures become the fewer contemporary witnesses can tell these stories especially for large analog picture archives knowledge and memories are spread over many people this creates several challenges first the pictures must be digitized to save them from decaying and make them available to the public since a simple listing of all the pictures is confusing the pictures should be structured accessibly second known information that makes the stories vivid needs to be added to the pictures users should get the opportunity to contribute their knowledge and memories to make this usable for all interested parties even for older less technophile generations the interface should be intuitive and error tolerant the resulting requirements are not covered in their entirety by any existing software solution without losing the intuitive interface or the scalability of the system therefore we have developed our digital picture archive within the scope of a bachelor project in cooperation with the bad harzburg stiftung for the implementation of this web application we use the ui framework react in the frontend which communicates via a graphql interface with the content management system strapi in the backend the use of this system enables our project partner to create an efficient process from scanning analog pictures to presenting them to visitors in an organized and annotated way to customize the solution for both picture delivery and information contribution for our target group we designed prototypes and evaluated them with people from bad harzburg this helped us gain valuable insights into our system s usability and future challenges as well as requirements our web application is already being used daily by our project partner during the project we still came up with numerous ideas for additional features to further support the exchange of knowledge

this book is the result of a group of researchers from different disciplines asking themselves one question what does it take to develop a computer interface that listens talks and can answer questions in a domain first obviously it takes specialized modules for speech recognition and synthesis human interaction management dialogue input fusion and multimodal output fusion basic question understanding and answer finding while all modules are researched as independent subfields this book describes the development of state of the art modules and their integration into a single working application capable of answering medical encyclopedic questions such as how long is a person with measles contagious or how can i prevent rsi the contributions in this book which grew out of the imix project funded by the netherlands organisation for scientific research document the development of this system but also address more general issues in natural language processing such as the development of multidimensional dialogue systems the acquisition of taxonomic knowledge from text answer fusion sequence processing for domain specific entity recognition and syntactic parsing for question answering together they offer an overview of the most important findings and lessons learned in the scope of the imix project making the book of interest to both academic and commercial developers of human machine interaction systems in dutch or any other language highlights include integrating multi modal input fusion in dialogue management van schooten and op den akker state of the art approaches to the extraction of term variants van der plas tiedemann and fahmi tjong kim sang hofmann and de rijke and multi modal answer fusion two chapters by van hooijdonk bosma krahmer maes theune and marsi watch the imix movie at nwo nl imix film like ibm s watson the imix system described in the book gives naturally phrased responses to naturally posed questions where watson can only generate synthetic speech the imix system also recognizes speech on the other hand watson is able to win a television quiz while the imix system is domain specific answering only to medical questions the netherlands has always been one of the leaders in the general field of human language technology and imix is no exception it was a very ambitious program with a remarkably successful performance leading to interesting results the teams covered a remarkable amount of territory in the general sphere of multimodal question answering and information delivery question answering information extraction and component technologies eduard hovy usc usa jon oberlander university of edinburgh scotland and norbert reithinger dfki germany

Chinese Political Culture

2016-11-10

the primary purpose of this book is to trace the theoretical methodological foundations of american educational technology it must be emphasized that this work is essentially as history of the process of educational technology rather than of products in the form of devices or media although

media have played an important rode in educational technology the reader should not lose sight of the central process which characterizes and underlies the true historical meaning and function of educational technology moreover the assumption is made that all current theory methodology and practice rests upon the heritage of the past indeed a common problem in the field has been the failure in many instances to take adequate account of past history in planning for the present or the future a related purpose of this book is to provide a selective survey of research in educational technology as it relates to the american public schools such research reviews are not intended to be comprehensive but were included because of their historical importance and their relevance in understanding the process of educational technology
