from the publisher this book explores how graphs can serve as maps to guide us when the information we have is ambiguous or incomplete using a visually diverse sampling of graphical display from heartrending autobiographical displays of genocide in the kovno ghetto to the pie chart of mystery in a new yorker cartoon wainer illustrates the many ways graphs can be used and misused as we try to make sense of an uncertain world picturing the uncertain world takes readers on an extraordinary graphical adventure revealing how the visual communication of data offers answers to vexing questions yet also highlights the measure of uncertainty in almost everything we do are cancer rates higher or lower in rural communities how can you know how much money to sock away for retirement when you don t know when you ll die and where exactly did nineteenth century novelists get their ideas these are some of the fascinating questions wainer invites readers to consider along the way he traces the origins and development of graphical display from william playfair who pioneered the use of graphs in the eighteenth century to instances today where the public has been misled through poorly designed graphs

What the Bible Really Tells Us 2017-05-17

so many of us grow up being constantly reminded about an all forgiving merciful and beneficent deity all throughout life it can even be drummed into us that we cannot live happy purposeful lives without a heavenly father who protects us and grants our wishes through prayer and if things don't go according to plan then we are simply told that god works in mysterious ways but what if we have more questions what if these things we are being told taught and even sold just don't live up to expectation what the bible really tells us looks to the very source of many of these doctrines and teachings about divinity and human nature the judeo christian bible in order to unveil some of the reasons why the same questions about god his nature and biblical history often reveal different and sometimes inconsistent or even contradictory answers exploring issues related to god's nature such as his character qualities and attributes as well as investigating biblical events and figures like adam and eve and creation noah and the flood and abraham and his chosen lineage it asks us not only to think critically about the factual discrepancies and oddities but also to question why this biblical god or gods as it may be is in fact so similar to ourselves the bible was written thousands and thousands of years ago but everybody has been conditioned and told to believe it regardless of the facts and sometimes even regardless of the often contradictory and inconsistent passages in the bible itself faced with an idiosyncratic god and an incongruous book we can study what the bible really tells us and confront a challenging thought did god create us or did we create him

how technological change in the west has been driven by the pursuit of improvement a history of technology from plows and printing presses to penicillin the atomic bomb and the computer why does technology change over time how does it change and what difference does it make in this sweeping ambitious look at a thousand years of western experience robert friedel argues that technological change comes largely through the pursuit of improvement the deep rooted belief that things could be done in a better way what friedel calls the culture of improvement is manifested every day in the ways people carry out their tasks in life from tilling fields and raising children to waging war improvements can be ephemeral or lasting and one person s improvement may not always be viewed as such by others friedel stresses the social processes by which we define what improvements are and decide which improvements will last and which will not these processes he emphasizes have created both winners and losers in history friedel presents a series of narratives of western technology that begin in the eleventh century and stretch into the twenty first familiar figures from the history of invention are joined by others the italian preacher who described the first eyeglasses the dairywomen displaced from their control over cheesemaking and the little known engineer who first suggested a grand tower to gustav eiffel friedel traces technology from the plow and the printing press to the internal combustion engine the transistor and the space shuttle friedel also reminds us that faith in improvement can sometimes have horrific consequences as improved weaponry makes warfare ever more deadly and the drive for improving human beings can lead to eugenics and even genocide the most comprehensive attempt to tell the story of western technology in many years engagingly written and lavishly illustrated a culture of improvement documents the ways in which the drive for improvement has shaped our modern world

for almost forty years the verdict on lyndon johnson s presidency has been reduced to a handful of harsh words tragedy betrayal lost opportunity initially historians focused on the vietnam war and how that conflict derailed liberalism tarnished the nation s reputation wasted lives and eventually even led to watergate more recently johnson has been excoriated in more personal terms as a player of political hardball as the product of machine style corruption as an opportunist as a cruel husband and boss in lbj randall b woods a distinguished historian of twentieth century america and a son of texas offers a wholesale reappraisal and sweeping authoritative account of the lbj who has been lost under this baleful gaze woods understands the political landscape of the american south and the differences between personal failings and political principles thanks to the release of thousands of hours of lbj s white house tapes along with the declassification of tens of thousands of documents and interviews with key aides woods s lbj brings crucial new evidence to bear on many key aspects of the man and the politician as private conversations reveal johnson intentionally exaggerated his stereotype in many interviews for reasons of both tactics and contempt it is time to set the record straight woods s johnson is a flawed but deeply sympathetic character he was born into a family with a liberal texas tradition of public service and a strong belief in the public good he worked tirelessly but not just for the sake of ambition his approach to reform at home and to fighting fascism and communism abroad was motivated by the same ideals and based on a liberal christian tradition that is often forgotten today vietnam turned into a tragedy but it was part and parcel of johnson s commitment to civil rights and antipoverty reforms lbj offers a fascinating new history of the political upheavals of the 1960s and a new way to understand the last great burst of liberalism in america johnson was a magnetic character and his life was filled with stories and scenes through insights gained from interviews with yamaha xj600s and xj600n service and repair manuals by ahlstrand alan haynes j h 2004 hardcover

professor fetter s economic principles is the second half of a two volume treatise on economics the first half economic principles deals with the basics the author of this volume is one of the great american economists his contributions to economic literature have been notable and while it would of course be too much to say that they have won universal acceptance it can safely be affirmed that they have quite generally been accorded respectful and sympathetic attention professor fetter occupies a place of distinction not only as a thinker and writer in the field of economics but also as a university teacher several years ago he served also as president of the american economic association few are better qualified therefore to prepare a general treatise on economics this volume constitutes the second part of a work dealing with the principles of economics which in some respects may be regarded as a revision of professor fetter s principles of economics published as a single volume but the treatment of the principles of value and distribution in volume i of the new work differs materially if not radically from that in the earlier text and at the same time as professor fetter himself remarks the years since have been so replete with interesting happenings in the field of practical problems that volume ii represents more than a mere revision of the corresponding chapters in the earlier book hence the present volumes taken together must be regarded as an essentially new contribution considering the variety of economic problems that professor fetter discusses it seems extraordinary that he has been able to compress his treatment within the limits of a comparatively small book his success in this direction however has been due to his method of treatment while essential facts have not been neglected he has not attempted to give an encyclopedic description of all the elements involved in the several problems but he has confined himself rather to a setting forth of the points of principle involved in them suggesting in this connection the solutions which sound analysis and a healthy for as a writer it will appear superfluous to speak of style but for those who may not know let it be said that professor fetter writes with a nicety and clearness of expression and with a delicacy of touch and of humor that stamp him as a writer of the first class

a new edition of a classic work that originated the embodied cognition movement and was one of the first to link science and buddhist practices this classic book first published in 1991 was one of the first to propose the embodied cognition approach in cognitive science it pioneered the connections between phenomenology and science and between buddhist practices and science claims that have since become highly influential through this cross fertilization of disparate fields of study the embodied mind introduced a new form of cognitive science called enaction in which both the environment and first person experience are aspects of embodiment however enactive embodiment is not the grasping of an independent outside world by a brain a mind or a self rather it is the bringing forth of an interdependent world in and through embodied action although enacted cognition lacks an absolute foundation the book shows how that does not lead to either experiential or philosophical nihilism above all the book s arguments were powered by the conviction that the sciences of mind must encompass lived human experience and the possibilities for transformation inherent in human experience this revised edition includes substantive introductions by evan thompson and eleanor rosch that clarify central arguments of the work and discuss and evaluate subsequent research that has expanded on the themes of the book including the renewed theoretical and practical interest in buddhism and mindfulness a preface by jon kabat zinn the originator of the mindfulness based stress reduction program contextualizes the book and describes its influence on his life and work
