Critical Voices in Teacher Education

2012-04-28

we live in dangerous times when educational policies and practices are debated largely in terms of how they fit with the needs of the free market this volume is a collection of writing by teacher educators that draws on their unique biographies experiences and perspectives to denounce these misguided norms it explores what it means practically and intellectually to teach for social justice in conservative times in a globalised world where the

power of capital holds sway the purposes of social institutions such as universities and schools is being refashioned in ways that are markedly instrumental and technicist in nature the consequence is that teachers work is increasingly constrained by regimes of control such as standardised testing accountability transparency and national curricula in the meantime large numbers of students and teachers are disengaging physically emotionally and intellectually from learning the contributors to this edited volume present both a powerful critique of these developments and a counter hegemonic vision of teacher education founded on the principles and values of social justice democracy and critical inquiry teacher education they argue involves a commitment to critical intellectual work that subjects some deeply entrenched assumptions beliefs habits routines and practices to closer scrutiny the contributing authors expose how ideology and power operate in seemingly blameless rational ways to perpetuate social hierarchies based on class gender sexuality race and culture

EBOOK: A-Z of Teaching 2013-07-16

when teachers are supported to work together in ways that allow them to deepen knowledge of their professional practice the understandings that emerge from their conversations about quality learning and teaching demonstrate a high level of expertise yet such professional knowledge is often deeply embedded within each teacher s everyday teaching the tacit knowledge that determines how and why they attend to student learning in certain ways this book captures the professional knowledge of teachers that developed as the result of an ongoing process of school based change where teachers began to work differently because they began to think differently about the learning that mattered for their students in their school the explication of their knowledge of practice became possible due to the ongoing support they received from their school leadership in most part because leadership trusted them as professionals to responsibly lead student learning within this culture of trust and valued collaboration working alongside external critical friends who supported their professional learning the teachers engaged in regular thought provoking and interactive professional dialogue

together they exposed and challenged each other's thinking and beliefs about learning and teaching captured and examined each other's practice and ultimately articulated and extended their professional knowledge the insights about this collaborative learning process and the emergent knowledge and understandings teachers develop about the interactive relationship between learning and teaching has much to contribute to educational discourse beyond the school setting some of that knowledge and the way it looks in practice is shared in this book

excerpt from mind studies for young teachers there are many teachers who know little about psychology and who have a desire to be better informed concerning its principles especially its relation to the work of teaching for the aid of such this book has been prepared but it is not a psychology only an introduction to it aiming to give some fundamental principles together with something concerning the philosophy of education its method is subjective rather than objective leading the student to watch mental processes and draw his own conclusions little of mind science that is of use to the teacher can be learned by reading books no subject is more dependent upon observation and experiment than this when mind growth and mental activities are understood by teachers instruction will become scientific and not as is now too frequently the case empirical if this little volume shall serve to hasten the time when teaching shall be more a profession and less a vocation the author will have accomplished all he designed about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

analysis of past developments in teacher education in pakistan has shown that substantial progress has been made in this field it has however been pointed out that education of science teachers still needs much improvement at the present there is an emergent need to meet the shortage of qualified science teachers and at the same time to bring qualitative improvements in the courses offered in teacher education institutions first we recommend that the 1 year duration of teacher preparation is grossly inadequate for all teaching courses and should be lengthened and the qualifications for entrance be increased we believe that teaching must be made a graduate profession for example the basic qualification of primary school teachers for admission to teacher education institution should be increased we recommend that ptc should be made a 12 2 year program similarly ct 12 3 b ed 14 2 b s ed 12 4 m a ed 14 3 and m ed one year after b ed or b s ed

secondly we think the quality of instruction in teacher preparation programs should be improved most teachers in the teacher preparation institutions use the lecture method most of the time prospective teachers behave like passive listeners to their teachers they do not participate in the teaching learning process some instructors even dictate their notes to the preservice teachers when the teachers join schools they behave the same way

When Teaching Gets Tough 2012

discussions of quality dominate the field of teacher education however definitions of quality can vary enormously and are often vague and imprecise relying on proxies for quality which make inaccurate assumptions about what matters in the education of teachers this book explores different ways in which quality can be defined and understood within teacher education offering a way of categorizing and understanding why some quality indicators miss the mark the book introduces the idea of a quality conundrum with illustrative examples from international ite practice to show how different conceptions of quality in ite can have good intentions but be potentially damaging to its overall transformative potential it also provides examples of where practice has been able to move beyond restrictive definitions of quality to enact a more transformative vision of teacher education this analysis ties the use of quality indicators to historical developments in teacher education and political shifts in how it is viewed the role education is perceived to play in society and considers where the power lies

in locating who decides what counts as quality in teacher education and also who and what gets excluded key topics covered include the use of standards accreditation and inspection frameworks the range of input process output and perspectival indicators used to judge quality in ite the different discourses of teacher quality which influence the pedagogy and structure of teacher education programmes the author also gives particular attention to how to address different approaches to quality when they start to reach conundrum proportions and how to redress teacher education towards what matters rather than what counts

what do teachers learn on the job and how if at all do they learn from experience leading researchers from the UK Europe the USA and Canada offer international research based perspectives on a central problem in policy making and professional practice the role that experience plays in learning to teach in schools experience is often weakly conceptualized in both policy and research sometimes simply used as a proxy for time in weeks and years spent in a school classroom the conceptualization of experience in a range of educational research traditions lies at the heart of this

book exemplified in a variety of empirical and theoretical studies distinctive perspectives to inform these studies include sociocultural psychology the philosophy of education school effectiveness the sociology of education critical pedagogy activism and action research however no one theoretical perspective can claim privileged insight into what and how teachers learn from experience rather this is a matter for a truly educational investigation one that is both close to practice and seeks to develop theory at a time when policy makers in many countries seek to make teacher education an entirely school based activity learning teaching from experience offers an essential examination of the evidence base the traditions of inquiry and the limits of those inquiries
