just like the world financial system but for different reasons 21st century corporations need a new business model for their enterprise supply chains the old conventions no longer work in this new world of volatile and increasingly unpredictable demand and supply the enterprise needs to become more connected to its own parts as well as its partners up and down the chains it participates in so too we need to embrace new ways of looking at customers to gain deeper more insightful impressions of what they are telling us about the way they want to buy our products and services finally these signals need converting into corresponding action driven by the people in the business leaders and staff alike who are aligned to their customers wishes this is the world of dynamic supply chain alignment where increasingly supply chains are the business in the follow up to his hugely successful strategic supply chain alignment john gattorna s dynamic supply chain alignment explores how to create and sustain multiple supply chains with a level of flexibility and responsiveness that allow you to respond to opportunities and threats at the same time aligning with your suppliers your partners and your customers when more executives get to this stage of development the profits will flow more readily and sustainability of performance will not be the same issue it is

today the way forward is right there in front of us but says john gattorna we must throw off old ways and embrace the new

## **Dynamic Supply Chain Alignment 2016-04-29**

this background paper to the state of food security and nutrition in the world 2023 analyses a key element of agrifood systems transformation the change of patterns in food supply and demand several studies have discussed this topic but the current one takes an innovative perspective of analysis considering these changes with a spatial perspective using the urban rural catchment areas urca approach to analyse changes in food expenditure across the rural urban continuum using living standards measurement studies lsms of 11 african countries the analysis is preceded by a literature review of agrifood value chains transformation stages drivers and current situation focused in low and middle income countries lmics and is followed by a macro review of food supply around the world and a macro meso review of the supply of wheat and rice in two african countries the conclusions shows that most food is purchased in all households across the rural urban continuum even in rural areas breaking with the myth of rural subsistence farming in africa in addition the results show a diffusion of the consumption of processed foods including in a lesser extent highly processed foods all across the rural urban continuum and not only in rural areas from a food supply perspective the low global availability of foods that are part of a healthy diet as fruits vegetables and legumes nuts and seeds calls for increasing efforts for producing more nutritious foods in all countries of the world

## **Analysis of food demand and supply across the rural-urban continuum for selected countries in Africa 2023-12-15**

omni channel retail and the supply chain the days of going to the local department store to buy a television view the options available and make a purchase now seem quaint the emergence of the internet smartphones social media and other technologies has opened a world of new options for consumers and businesses to review research and buy online with an ever increasing array of delivery options the emergence of e commerce has resulted in what is commonly known today as omni channel marketing in which customers engage with companies in a variety of ways including in a physical store or online via websites and mobile apps this process puts the supply chain front and center as consumers are increasingly demanding and browsing buying and returning goods through various channels not just the traditional brick and mortar way to accomplish this with high levels of service while remaining profitable requires real time visibility of inventory across the supply chain and a single view of consumers as they continuously move from one channel to another while this is a boon to consumers it has made the already complex global supply chain even more challenging to manage on top of that the 2020 covid19 pandemic has accelerated this omni channel retail trend as consumers need even more ways to order and additional options for last mile delivery such as curbside pickup covid19 has exposed a lack of flexibility and readiness resulting in shortages of everything from toilet paper and meats to personal protective equipment ppe and ventilators it has been a real life example of the bullwhip effect where variability at the consumer end of

the supply chain results in increased variability as one goes upstream towards distributors manufacturers and suppliers this results in shortages misallocations and increased costs no longer can a manufacturer distributor or retailer of consumer products just fill the pipeline and wait for orders to come in now they must anticipate various purchases and delivery items while at the same time minimizing costs to do this is no easy task requiring a lean agile and responsive supply chain until now there was no existing playbook for organizations to navigate their way through this new world this book describes the impact of omni channel marketing on the supply chain and logistics functions and is intended to help management meet the needs of not only today's ever changing world but to anticipate what may be required in the future to achieve superior customer service profitability and a competitive advantage
