developments in both computer hardware and perhaps the greatest impact has been felt by the software over the decades have fundamentally education community today it is nearly changed the way people solve problems impossible to find a college or university that has technical professionals have greatly benefited not introduced mathematical computation in from new tools and techniques that have allowed some form into the curriculum students now them to be more efficient accurate and creative have regular access to the amount of in their work computational power that were available to a very exclusive set of researchers five years ago this maple v and the new generation of mathematical has produced tremendous pedagogical computation systems have the potential of challenges and opportunities having the same kind of revolutionary impact as high level general purpose programming comparisons to the calculator revolution of the languages e g fortran basic c 70 s are inescapable calculators have application software e g spreadsheets extended the average person s ability to solve computer aided design cad and even common problems more efficiently and calculators have had maple v has amplified our arguably in better ways today one needs at mathematical abilities we can solve more least a calculator to deal with standard problems problems more accurately and more often in in life budgets mortgages gas mileage etc specific disciplines this amplification has taken for business people or professionals the excitingly different forms a complete software package consisting of the printed book and a cd rom with diskettes available on request the interactive text includes a graphical user interface for easy navigation through the text along with animations that explain linear algebra concepts geometrically interactive lessons with emphasis on experimentation and conjecturing a collection of labs which strengthens the learning of the concepts applications which stress modelling and the use of linear algebra in various disciplines a unique library of interactive high level functions written in maple v that can be used in different modes a stand alone testing system the authors believe that students of mathematics should enjoy understand assimilate and apply the skills and concepts they study and as such here they play a fundamental and active role throughout the learning process maple v release51 maple2 34 the maple summer workshop and symposium msws 94 reflects the growing commu nity of maple users around the world this volume contains the australia and nine come from europe of european papers two are from ger many two are from the netherlands two are from spain and one each is from switzerland denmark and the united kingdom more important than the geographical diversity is the intellectual range of the contributions we begin to see in this collection of works papers in which maple is used in an increasingly flexible way for example there is an application in computer science that uses maple as a tool to create a new utility there is an application in abstract algebra where maple has been used to create new functionalities for computing in a rational function field there are applications to geometrical optics digital signal processing and experimental design accompanying cd rom includes all maple v input
