the first modern title to cover the varied and complex world of ship management in the 21st century ship management has constantly had to evolve to take into account the advancements in technology as well as the demands of the shipping industry having internet access and email on board ship has meant that the ship manager has to possess certain sets of skills to function effectively in the post including computer literacy the emergence of large multi national ship management companies has also changed how business is conducted and this in turn means that the ship manager and tiers of management within the organization have had to evolve to cope with the demands of working with a multi national workforce furthermore since the mid 1980s there has been an ever expanding raft of legislation that is more restrictive for companies to meet and a shrinking of profit margins has seen a shift in how companies are required to operate to survive this book addresses the demands of 21st century ship management with the focus of the book as much on the people who manage ships as on the theory and practice of ship management

this book examines the role of the international maritime organization imo in the prevention and control of pollution of the marine environment from vessels with a particular reference to the current north south tensions regarding the strategy for combating climate change in the maritime sector as well as the prevention of marine pollution from the ship breaking industry the imo a united

nations specialized agency has been entrusted with the duty to provide machinery for cooperation among governments for the prevention and control of pollution of the marine environment from vessels the organization is responsible for drafting legal instruments as well as for facilitating technical cooperation for the protection of the marine environment although imo legal instruments are mainly targeted at the prevention of pollution of the marine environment from vessels there is a trend towards a liberal interpretation of this and the organization has expanded its work to areas like shipbreaking which is essentially a land based industry

straits are peripheral formations in the study of geography but have long been a source of controversy in international relations they connect separate seas and divide the territory of states this geographical fact invites legal disputes over international boundary drawing request for passage by foreign ships assertion of territorial control over the waters forming straits and the basis for a regime generally accepted as law in our times this is a thorough and well documented book which combines elements of history geography international shipping and the law of the sea it asks the central question what exactly is the current law governing this area and also goes on to consider the concept of international straits the distinction between existing treaty based regimes and the general regime and the special characteristics of straits that separate them from similar arms of the sea in terms of law in answering these questions the author takes us back to the first regime for international straits in 1949 through to the practices of the present day this will be an invaluable text for all international lawyers particularly those specializing in the law of sea

this collection of papers examines a variety of areas and issues related to or raised by the eu internal security strategy it covers such matters as critical infrastructure protection and environmental crime from a range of disciplinary perspectives including law geography and politics the eu internal security strategy is becoming increasingly complex as it develops over time as it has to operate against the background of growing diversity in law enforcement systems across eu member states it is clear that the eu internal security strategy is and will continue to be for a long time a work in progress not only in its aim to address traditional transnational security threats but also in reacting to emerging concerns either in new crime areas or issues arising from the implementation of earlier phases of the strategy this will be a subject matter for many academic discipline areas for some time to come

waste management poses increasing challenges to both the protection of the environment and to human health to face these challenges this book claims that environmental law needs to shift attention from media specific pollution regimes to integrative life cycle approaches of waste management i e from the prevention of waste generation to the actual handling of wastes furthermore the cooperation of states and the establishment of coordinated activities is essential because states can no longer have separate standards for wastes posing transboundary risks and for purely domestic wastes drawing upon both international and eu law the book provides a detailed analysis of the regimes set up to deal with the transboundary movement of wastes and ship source pollution so as to elucidate the obligations and legal principles governing such regimes it concludes that treaty obligations concerning transboundary movements of wastes are inapplicable to ship wastes while on board ships and on land however despite the limitations of the transboundary movement of wastes regime the principle of environmentally sound management esm embodied in this regime has gradually transformed into a legal principle esm works to address the legal gaps in the regulation of wastes and consequently it provides the desired coherence to the legal system since it acts as a bridge between several regulatory and sectoral levels furthermore esm offers a new light with which to understand and interpret existing obligations and it provides a renewed impetus to regimes that directly and indirectly govern wastes this impetus translates into greater coordination and the establishment of cross sectional policies by offering alternative ways to solve problems linked to the management of ship wastes in the sea land interface this book will appeal to anyone with an interest in international environmental law

this first book in a three volume work on sea bed energy and minerals the international legal regime is concerned with the law governing the exploitation of energy and mineral resources in two quite different sub marine areas volume 1 deals with the areas within the limits of national jurisdiction that is all of the submarine areas extending from the coast to the seaward limit of the continental shelf as its subtitle indicates this volume is predominantly concerned with the continental shelf although the united nations convention on the law of the sea has still not entered into force and indeed may not do so for many years for some of the major maritime powers its adoption in 1982 did nonetheless usher in a period of relative stability in the rules governing the areas within national jurisdiction including in particular the continental shelf however being the creatures of compromise some of its rules are undeniably vague and it has been left to state practice and international courts and tribunals to develop these rules further especially those relating to the delimitation of the continental shelf between neighbouring states volume 1 provides an analysis of the rules of conventional and customary law in the light of this practice volume 2 on sea bed mining deals with the area beyond the limits of national jurisdiction that is the submarine area lying seaward of the outer limit of the continental shelf volume 3 which will be published at the same time as volume 2 will provide documents tables and bibliography relating to the subject matter of the first two volumes
