one of the world's great designers shares his vision of the fundamental principles of great and meaningful design that's even more relevant today than it was when first published. Tim Brown, CEO of IDEO, even the smartest among us can feel inept as we fail to figure out which light switch or oven burner to turn on or whether to push, pull, or slide a door. The fault argues this ingenious, even liberating book lies not in ourselves but in product design that ignores the needs of users and the principles of cognitive psychology. The problems range from ambiguous and hidden controls to arbitrary relationships between controls and functions, coupled with a lack of feedback or other assistance and unreasonable demands on memorization. The design of everyday things shows that good, usable design is possible. The rules are simple: make things visible; exploit natural relationships that couple function and control; and make intelligent use of constraints. The goal: guide the user effortlessly to the right action on the right control at the right time. The design of everyday things is a powerful primer on how and why some products satisfy customers while others only frustrate them.

日本是 19 世纪唯一在 1900 年之前实现工业化的非西方国家，其跃入现代时代激发了历史学家和社会科学家之间的激烈辩论。苏珊·B·汉利在《日本三百年》中探讨了从江户时代到现代日本的日常生活，她得出结论：日本人在此期间的物质生活并不比同时代的西方人差。汉利通过考察食物、卫生、住房和交通，揭示了日本如何在资源有限的情况下实现快速工业化。本书提供了关于日本日常生活的有趣见解，并对现代化对日常生活的影响进行了跨文化比较。

japan was the only non western nation to industrialize before 1900 and its leap into the modern era has stimulated vigorous debates among historians and social scientists in an innovative discussion that posits the importance of physical well being as a key indicator of living standards susan b hanley considers daily life in the three centuries leading up to the modern era in japan she concludes that people lived much better than has been previously understood at levels equal or superior to their western contemporaries she goes on to illustrate how this high level of physical well being had important consequences for japan s ability to industrialize rapidly and for the comparatively smooth transition to a modern industrial society while others have used income levels to conclude that the japanese household was relatively poor in those centuries hanley examines the material culture food sanitation housing and transportation how did ordinary people conserve the limited resources available in this small island country what foods made up the daily diet and how were they prepared how were human wastes disposed of how long did people live hanley answers all these questions and more in an accessible style and with frequent comparisons with western lifestyles her methods allow for cross cultural comparisons between japan and the west as well as japan and the rest of asia they will be useful to anyone interested in the effects of modernization on daily life

this thesis explores how babies 1 18 months old engage with material things in their everyday lives the aim is to contribute with theoretical and empirical insights into babies own practices around material things and how attending to these practices can lead to reflections on participation material culture and everyday space the empirical material is collected through video ethnographic fieldwork in the homes of seven babies and their families the empirical material has been analysed through combining cultural analysis with the analytical approach thinking with theory the thesis shows that sensoriality and movement is important for understanding babies own engagements with things and that these engagements are not limited to things given to or intended for them babies also shape the everyday spaces of the families through their movements of things in their homes the analyses also show that focusing on sensoriality and movement in the meeting

between babies and the researcher is a promising contribution to discussions concerning participatory research and ethnographic method the thesis is theoretically situated within the field of child and childhood studies avhandlingens syfte är att undersöka hur bebisar 1 18 månader använder sig av materiella saker i deras vardagsliv syftet är att bidra med empirisk och teoretisk kunskap om bebisars egna praktiker samt hur ett fokus på bebisars egna intressen kan leda till reflektioner kring barns deltagande materiell kultur och platsskapande i bebisars hem det empiriska materialet har samlats in genom videoetnografiskt fältarbete hemma hos sju bebisar och deras familjer materialet har analyserats med hjälp av en kombination av kulturanalys och genom att tänka med teori om rörelse avhandlingen visar att fokus på sensorialitet och rörelse är viktigt för att förstå vad bebisar gör med saker och att bebisars användande av saker inte är begränsat till leksaker eller andra saker avsedda för dem bebisar påverkar även hur hemmet är organiserat till exempel genom att flytta runt och sprida ut saker i hemmet analyserna pekar även på att ett fokus på sensorialitet och rörelse i mötet mellan bebisar och forskare är lovande för att undersöka frågor rörande etnografisk metod och deltagande avhandlingen är teoretiskt förankrad i barn och barndomstudier
