TOX-TIPS, Toxicology Testing in Progress 2011-11-03

the brain consisting of billions of neurons is probably the most complex and mysterious organ of the body understanding the functioning of the brain in its health and disease states has baffled the researchers working in this area for many years the diversity of brain diseases and disorders makes the analysis of brain functions an even more challenging area of research in vitro and in vivo studies regarding the brain may be laborious however bioinformatics using in silico approaches may take the burden off the experimental studies and give us a clearer perspective on disease and healthy states of the brain its functions and disease mechanisms recent advancements in neuroimaging technologies the development of high performance computers and the development of software algorithms and methods to analyze data obtained from various neuroimaging processes have opened new frontiers in neuroscience enabling unprecedented finer analysis of the brain functions this relatively new approach of brain analysis which may be termed bioinformatics of the brain is the main subject of this volume aiming to provide a thorough review of various bioinformatics approaches for analyzing the functioning of the brain and understanding brain diseases such as neurodegenerative diseases brain tumors and neuropsychiatric disorders authors from various disciplines in this volume each focus on a different aspect aiming to expand our understanding of this area of research topics included are brain diseases and disorders stem cell therapy of neurodegenerative diseases tissue engineering applications of gliomas brain tumor detection and modeling brain tumor growth simulation brain computer interface bioinformatics of brain diseases graph theoretical analysis of complex brain networks brain proteomics this book is intended to aid scientists researchers and graduate students in carrying out interdisciplinary research in the areas of bioinformatics bioengineering computer engineering software engineering mathematics molecular biology genetics and biotechnology
