Ubuntu 10.04 Lts Installation Guide 2018-11-18 network common data form netcdf
is a self describing machine independent file format for storing array oriented
scientific data over the past few years there has been a growing movement within

the community of natural resource managers in the everglades fla to use netcdf as the standard data container for datasets based on multidimensional arrays as a consequence a need arose for additional tools to view and manipulate netcdf datasets specifically to create subsets of large netcdf files to address this need we created the everview slice and dice tool to allow users to create subsets of grid based netcdf files the major functions of this tool are 1 to subset netcdf files both spatially and temporally 2 to view the netcdf data in table form and 3 to export filtered data to a comma separated value file format
