Globalization or Regionalization of the American and Asian Car Industry? 2013-02-04 the automobile sector is one of the most archetypal global industries and is seen by many as one of the main drivers behind the homogenisation of world markets due to firms internationalization strategies and the social practices that firms impose this book argues that this is not entirely the case due to the heterogeneity of firms and the diversity of strategies pursued it highlights the diversity and forms of internationalization and the preference for regionalization rather than globalization that has occurred over the past decade this book looks specifically at the american and asian car industry

Synthetics, Mineral Oils, and Bio-Based Lubricants 2002 highlighting the major economic and industrial changes in the lubrication industry since the first edition synthetics mineral oils and bio based lubricants second edition outlines the state of the art in each major lubricant application area chapters cover trends in the major industries such as the use of lubricant fluids growth or decline of market areas and applications potential new applications production capacities and regulatory issues including biodegradability toxicity and food production equipment lubrication in a single unique volume synthetics mineral oils and bio based lubricants second edition offers property and performance information of fluids theoretical and practical background to their current applications and strong indicators for global market trends that will influence the industry for years to come

Handmade 2004 a fresh and entertaining perspective on materials science involving the craftspeople who have built their careers around working with materials such as clay stone steel and wool from atomic structures to theories about magnetic forces scientific progress has given us a good grasp on the properties of many different materials however most scientists cannot measure the temperature of steel just by looking at it or sculpt stone into all kinds of shapes or know how it feels to blow up a balloon of glass handmade is the story of materials through making and doing author and material scientist anna ploszajski journeys into the domain of makers and craftspeople to comprehend how the most popular materials really work anna has the fresh perspective of someone at the forefront of the field each chapter features her accounts of learning from masters of their respective crafts along the way anna builds a fuller picture of materials and their place in society as well as how they have intersected with her own life experiences from land racing on american salt flats to swimming the english channel she visits a blacksmith explores how working with the primal material clay has brought about some of the most advanced technologies and delves down to the atomic scale of glass to find out what makes it glassy handmade affords us a new understanding of the materials we encounter every day and an appreciation for the skills needed to fashion them into objects that are perfectly formed for the jobs they do

Human Factors of a Global Society 2016-04-19 during the last 60 years the discipline of human factors hf has evolved alongside progress in engineering technology and business contemporary hf is clearly shifting towards addressing the human centered design paradigm for much larger and complex societal systems the effectiveness of which is affected by recent advances in engineering science and education human factors of a global society a system of systems perspective explores the future challenges and potential contributions of the human factors discipline in the conceptual age of human creativity and social responsibility written by a team of experts and pioneers this book examines the human aspects related to contemporary societal developments in science engineering and higher education in the context of unprecedented progress in those areas it also discusses new paradigms for higher education including education delivery and administration from a systems of systems perspective it then examines the future challenges and potential contributions of the human factors discipline while there are other books that focus on systems engineering or on a specific area of human factors this book unifies these different perspectives into a holistic point of view it gives you an understanding of human factors as it relates to the global enterprise system and its newly emerging characteristics such as quality system complexity evolving management system and its role in social and behavioral changes by exploring the human aspects related to actual societal developments in science the book opens a new horizon for the hf community

Autocar 2010-11-11 ergonomics often seems to be involved too late in commercial project development processes to have substantive impact on design and usability however in the automotive industry and specifically in relation to in vehicle information systems ivis a lack of attention to usability can not only lead to poor customer satisfaction it can also present a significant risk to safe and efficient driving usability evaluation for in vehicle systems describes how to apply a range of usability evaluation methods for ivis the authors explore the driving context and the range of driver ivis interactions using case studies that show how ergonomics methods can add considerable value throughout the product development process they emphasize practical approaches that can be used to predict and analyze driver behavior with ivis the authors also present validation evidence for the methods covered the book has three key objectives define and understand usability in the context of ivis this guides the specification of criteria against which usability can be successfully evaluated develop a multi method framework to support designers in the evaluation of ivis usability the underlying motivations for the framework are a need for early stage evaluation to support proactive redesign and a practical and realistic approach which can be used successfully by automotive manufacturers develop an analytic usability evaluation method which enables useful predictions of task interaction whilst accounting for the specific context of use of ivis the major challenge of this particular context of use is the dual task environment created by interacting with secondary tasks via an ivis at the same time as driving written for students researchers designers and engineers the book is not only a guide to the practical application of evaluation methods it also presents important theoretical concepts and hypotheses describing the behavior of drivers and the effects of ivis interactions it provides a framework for developing more usable systems to enhance the overall driving experience by meeting the needs of the driver safety efficiency and enjoyment
