affective brain circuits underpin our moods and emotions appetitive and aversive stimuli from our exteroceptive and interoceptive worlds play a key role in the activity of these circuits but we still do not know precisely how to characterize these so called reward related and

aversion related systems moreover we do we yet understand how they interact anatomically or functionally the aim of the current project was to gather some translational evidence to help clarify the role of such circuits a multi dimensional problem in its own right the book contains 14 works from authors exploring these questions at many levels from the cellular to the cognitive behavioural and from both experimental and conceptual viewpoints the editorial which introduces the book provides brief summaries of each perspective hayes northoff greenshaw 2015 while questions of how to accurately define affect and emotion related concepts at the psychological level are far from answered here we have attempted to provide some insight into the brain based underpinnings of such processes the near future will undoubtedly involve making new inroads and will require the joint efforts of behavioural brain based and philosophical perspectives to do so

Handbook of Depression, Second Edition

2008-10-23

this book is based on a symposium that was inspired by the late donald o hebb who in his latter years while an honorary professor in the department of psychology at dalhousie university became very interested in the phenomenon of multiple personality and other

dissociative states hebb was troubled by the lack of understanding of dissociative behavior and through his discussions with basic science and clinical colleagues in psychology and psychiatry he became convinced that the subject would be a figurative gold mine for psychological theory and experimentation the purpose of the symposium was to bring together clinical and research scientists with an interest and expertise in dissociative phenomena such as multiple personality disorder hysteria and hypnosis this group would exchange ideas and findings discuss theory and lay the groundwork for an interdisciplinary research program into dissociative phenomena generally and more specifically into multiple personality disorder and its principal precipitating factor physical and sexual abuse in children
