PSYCHOLOGY 2020

this short book grapples with two vast questions the nature of our minds and our place in the wider universe it considers how one mutually influences the development of the other the changes and challenges that will accompany the first humans to leave earth and travel to another planet or even further will not only impact our technical capabilities but will also represent a watershed moment within our individual and collective human psychology many of the problems of resource use environmental degradation and waste or destructive processes are

contained in the larger process of exploring another environment and planet but this book also offers a shift in perspective that allows us to consider humanity from an alternative more holistic perspective reappraising our own minds both individually and within dynamic social processes the psychology of space exploration considers our place and purpose in the widest possible perspective that of space exploration and the natural universe it doesn't seek to answer these questions but provides a perspective to explore even further

Understanding Psychopathology 2014

this book captures the official reports from the european space agency esa study technologies and techniques for psychological support of astronauts during exploration missions to the moon and mars the study was commissioned by the esa in 2005 even before the uk space agency was formed in 2010 the need for the european space agency study of technologies and techniques for psychological support during long duration exploration missions comes from a human desire for space exploration which can be realised in the near future this undertaking is honourable and

exciting but is challenging even for the most mentally prepared and trained astronauts and cosmonauts the crew will travel to where no human has been before to farther parts of the solar system and the crew will need to be dependent on each other and aware that they will be without any hope of rescue in case of an unforeseen mentally challenging or life threatening event hence the challenge extends to scientists and industry to devise techniques and technologies that can support and help the crew on exploration missions long duration exploration missions to the moon or mars will pose new critical psychological issues to space crews compared to low earth orbit flights most psychological support measures in use today are employed in flight examples are regular private conferences with psychologists regular conferences with family resupplies uplink of news visiting crews etc however due to communication delays and mission characteristics these measures will be possible only in a limited way human space exploration is a test of human abilities specifically extending our knowledge and understanding of human capabilities and limitations therefore much more emphasis will have to be placed on support measures that reduce the risk of mission critical psychological problems space mission is also a test of technology and how this can provide efficient support throughout the duration of a long mission the book consists of three parts the first part describes psychological challenges constraints existing solutions and their applicability for mars and moon missions the focus of the second part is a formulation of a global baseline concept for future psychological support the third part of the book consolidates information in a global baseline concept for psychological support during exploratory missions with the recommendations and development plan iyawhiteley com biotriz com

astronauts live and work in highly unusual and challenging environments where they must withstand multiple stressors their abilities to maintain positive psychological outlooks and good interpersonal relations are crucial for personal well being and mission success from the

inception of the space program psychologists psychiatrists human factors experts and other professionals have warned that the psychological stressors of space should be treated as a risk factor and that the risk would increase as missions involved larger more diversified crews undertaking increasingly long flights thus they called for research leading to the development and application of effective countermeasures although psychology played a significant role at the inception of the space program for many years thereafter certain areas of psychology all but disappeared from nasa interest in psychosocial adaptation was rekindled in the mid 1990s when astronauts joined cosmonauts on the russian space station mir nasa's recognition of the field of behavioral health and its links to performance opened the door to many kinds of research that were formerly overlooked focusing on the underutilized areas of personality and social psychology the chapters that follow discuss psychology's struggle for acceptance the history of astronaut selection and psychological support the use of analog environments and simulators for research and training space tourism the psychological rewards of viewing earth from space crew composition and group dynamics and cross cultural aspects of international missions this book concludes with a summary integration and evaluation of the role of psychology in space exploration
