Autoimmune Diseases and Diagnostic Approaches 2021-06-17 this book is the proceedings of the falk symposium no 127 on autoimmune diseases in paediatric gastroenterology iv international falk symposium on paediatric gastroenterology held in basel switzerland on november 8 9 2001 the symposium focused on the role of the immune system both the acquired and the innate systems in inflammatory bowel disease ibd in children and adolescents the innate system has an important fundamental role in host defence by initiating immune responses against potentially deleterious matter however a mutation within the innate system may elicit an immune response against the host hence an autoimmune response chronic autoimmune hepatitis occurs predominantly in young people and especially in women immunological changes are conspicuous tissue antibodies are found in a large number of patients this is a disease of disordered immunoregulation marked by a deficit in suppressor t cells causing the production of autoantibodies against specific hepatocyte surface antigen liver membrane protein is found in the sera of patients with autoimmune chronic acute hepatitis and with primary biliary cirrhosis pbc the latter condition of progressive granulomatous destruction of intrahepatic bile ducts is in many respects analogous to the graft versus host syndrome where the immune system has become sensitized to foreign hla molecules primary sclerosing cholangitis psc is another condition of unknown origin all parts of the biliary tree can be involved in a chronic fibrosing inflammatory process that results in obliteration of the biliary tree and ultimately in biliary cirrhosis about half of the patients also suffer from ulcerative colitis and rarely from crohn s disease circulating antibodies to some antigens are found in obstructed portal tracts as well as increased concentrations of biliary immune complexes in patients with pbc in all three previous falk symposia on paediatric gastroenterology attention was focused on the role of the innate immune system in the aetiology of ibd it has become increasingly clear in recent years that the innate system has a much more important and fundamental role in host defence the decision to initiate an immune response is one of the major roles of the innate system mutations within this system could transform it into becoming constitutively active resulting in an inflammatory reaction and thus eliciting an autoimmune response following an introduction to the basic phenomena of autoimmunity the proceedings discuss clinical aspects of autoimmune diseases in particular current knowledge and the state of the art about the diagnosis and treatment of the autoimmune diseases of the gastrointestinal tract are described by world renowned experts the book also contains the short presentations on selected topics as well as abstracts of the mini posters read by title which were included in the symposium

Diagnostic Criteria in Autoimmune Diseases 2010-06-08 autoimmunity is the downstream outcome of a rather extensive and coordinated series of events that include loss of self tolerance peripheral lymphocyte activation disruption of the blood systems barriers cellular infiltration into the target organs and local inflammation cytokines adhesion molecules growth factors antibodies and other molecules induce and regulate critical cell functions that perpetuate inflammation leading to tissue injury and clinical phenotype the nature and intensity of this response as well as the physiological ability to restore homeostasis are to a large extent conditioned by the unique amino acid sequences that define allelic variants on each of the numerous participating molecules therefore the coding genes in their germline configuration play a primary role in determining who is at risk for developing such disorders how the disease progresses and how someone responds to therapy although genetic components in these diseases are clearly present the lack of obvious and homogeneous modes of transmission has slowed progress by preventing the full

exploitation of classical genetic epidemiologic techniques furthermore autoimmune diseases are characterized by modest disease risk heritability and multifaceted interactions with environmental influences yet several recent discoveries have dramatically changed our ability to examine genetic variation as it relates to human disease in addition to the development of large scale laboratory methods and tools to efficiently recognize and catalog dna diversity over the past few years there has been real progress in the application of new analytical and data management approaches

In All Your Ways 2011 w b harrison b a c dijkman during the last decade intervention has been instituted for all kinds of disease even in a premonitory state as early as possible to control the activity of the disease to avoid further damage and to maintain quality of life apart from the principle treat now not later emphasis is laid on aggressive initial therapy these adagia have influenced in recent times all fields of medicine from oncology to infectious diseases and also the topic of the present edition the autoimmune diseases as an example of the latter rheumatoid arthritis RA demonstrates how the attitude of physicians has been changed from an expectant point of view in the eighties *primum nil nocere* the attitude has been changed as we approached and

entered the new millennium to initial aggressive therapy especially in patients with a poor prognosis despite the advance of instituting monotherapy with a single optimised disease modifying anti rheumatic drug dmard with methotrexate as prototype agent in ra adequate disease remission is not often achieved and adverse events may well prevent the use of higher dosages of the single agent in question therefore the next step was to combine two or more dmards the choice of combining dmards can be purely practical and based upon the anti rheumatics most used in daily practice for instance methotrexate and sulphasalazine the choice of combining drugs can be influenced by different toxicity patterns to avoid cumulative toxicity
