Pocket Guide to Chemotherapy Protocols

2007-07

an indispensable quick reference for physicians nurses and other healthcare providers treating cancer patients the updated fourth edition of the best selling pocket guide to chemotherapy protocols is spiral bound and arranged alphabetically by cancer type for easy access and contains combination as well as selected single agent regimens for solid tumors and hematologic malignancies in each case the regimens selected are based on the published literature and are used in clinical practice in the medical oncology community pocket guide to chemotherapy protocols fourth edition continues the success of previous editions by offering cancer care professionals complete authoritative information in a convenient format comprehensive authoritative pocket sized quick access evidence based up to date

Companion Handbook to the Chemotherapy Sourcebook

2004

designed for quick reference this handbook provides easily accessible information on the specific drugs and treatment regimens used in cancer chemotherapy this updated second edition includes new drugs and

combinations of drugs and reflects the increasing use of chemotherapy in combination with radiation and surgery the first section presents site specific cancer staging tables treatment recommendations and combination chemotherapy regimens and includes chapters on toxicity grading dose modifications and precautions the second section alphabetically lists all current chemotherapeutic agents and provides essential information on each drug including interactions toxicity indications and dosing the third section focuses on control of side effects this edition is also available electronically for handheld computers see media listing for details

Chemotherapy and Immunotherapy in Urologic Oncology

2020-09-29

this book is designed to familiarize clinical practitioners in systemic therapy options and medical management of urologic malignancies including prostate cancer bladder and upper tract urothelial carcinoma and renal cell carcinoma organized by organ system the text highlights new therapies such as novel forms of androgen deprivation cytotoxic chemotherapy immune check point and immunomodulatory agents and targeted therapies written by experts in the field the book also reviews current chemotherapy and immunotherapy regimens for genitourinary malignancies and discusses indications outcomes and toxicities as well as clinical trial concepts each of the book s chapters offers a

bulleted box of clinical pearls on the particular role of the app chemotherapy and immunotherapy in urologic oncology a guide for the advanced practice provider is a resource for urologists uro radiologists medical clinicians and family practitioners alike familiarizing its audiences with systemic therapy regimens for urologic malignancies as well as their expected outcomes and side effects

Handbook of Cancer Chemotherapy

2011

skel s handbook of cancer chemotherapy combines in one place the most current rationale and specific details necessary to safely administer chemotherapy for most adult cancers the handbook is a practical diseased focused pocket reference that emphasizes the best current medical practice as it relates to the delivery of chemotherapeutic drugs by focusing on specific plans for treatment the book is an invaluable resource for the daily care of cancer patients

Induction Chemotherapy

2016-05-27

this book presents the full range of management techniques and practices used in induction chemotherapy both systemic and locoregional by experienced international groups within one accessible volume it provides the latest information on the pioneering and cutting edge practices employed in different institutions and documents the advantages of integrated treatment schedules all those responsible for treating patients with locally advanced cancers may find new interesting aspects of locoregional cancer management and will find this book to be an invaluable source of up to date information throughout the world induction chemotherapy is being used as part of an integrated plan of management for locally advanced solid tumors while systemic chemotherapy is most commonly used to shrink primarily non operable tumors in cases of poorly or nonresponsive tumors attempts have been made to administer chemotherapeutics via the arterial route in order to achieve higher localized drug exposure and response rates such therapies are being practiced worldwide in independent remote departments in universities teaching hospitals and clinical schools frequently however these teams remain relatively unaware of the work being done in other institutions which may slow further progress

Cancer Chemotherapy 1

2012-12-06

where do you begin to look for a recent authoritative article on the diagnosis or management of a particular

malignancy the few general oncology textbooks are generally out of date single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients certain general journals frequently publish good indepth reviews of cancer topics and published symposium lectures are often the best overviews available unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered cancer treatment and research is a series of authoritative volumes which aim to meet this need it is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription we have approached the problem in the following fashion first by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more

Neoadjuvant Chemotherapy

2012-02-01

the most significant advances in cancer therapy in recent years have involved the development of systemic therapeutics with improvements in response rates in solid tumors opportunities have arisen to enhance the effectiveness of surgery administration of systemic therapy prior to surgery neoadjuvant chemotherapy represents one approach by which clinicians have successfully reduced the extent of surgery and in some instances positively impacted on clinical outcomes this collection of works by expert clinicians from a variety of disciplines represents an exploration of the current knowledge of the role of neoadjuvant chemotherapy in diverse tumor types

The Chemotherapy Source Book

2008

the chemotherapy source book fourth edition pulls together all the current information on the chemotherapeutic management of cancer patients including choice of chemotherapeutic agents use of combinations and toxicity of individual drugs organized by disease site the book brings together pharmacologic and patient management information in one source that clinicians can consult for any question encountered in the delivery of chemotherapy this updated fourth edition includes new drugs as well as new indications for older drugs content has been streamlined to provide essential information more quickly for the busy practitioner plus this edition is softcover for greater portability and convenience

Platinum and Other Heavy Metal Compounds in Cancer Chemotherapy

2009-01-09

cisplatin the first member of the family of platinum containing chemotherapeutic agents was discovered by barnett rosenberg in 1965 and approved by the fda for marketing in 1978 after 30 years of use in the clinic cisplatin remains a central element of many treatment regimens cisplatin is still an irreplaceable component of a regimen that produces high cure rates in even advanced nonseminomatous germ cell cancers and is widely used in the treatment of ovarian cancers and other gynecologic cancers head and neck and numerous other tumor types the development of carboplatin has reduced some of the adverse events associated with cisplatin treatment and the introduction of the dach platinum compound oxaliplatin has broadened the spectrum of activity of the platinum compounds to include gastro intestinal cancers especially colorectal cancer the clinical importance of this family of drugs continues to drive investigation into how these drugs work and how to improve their efficacy and reduce their toxicity the papers in this volume were presented in verona italy during the tenth international symposium on platinum coordination compounds in cancer chemotherapy the symposium was jointly organized by the department of oncology of the mater salutis hospital azienda sanitaria locale 21 of the veneto region and by the department of medicine and public health section of pharmacology the university of verona they reflect the vitality of this field and the increasing use of new molecular and cell biologic genetic and biochemical tools to identify approaches to

further improve their use

Targets for Cancer Chemotherapy

2002-04-03

in targets for cancer chemotherapy transcription factors and other nuclear proteins a panel of leading basic researchers pharmaceutical scientists and clinical oncologists explain in detail the therapeutically relevant protein targets that contribute to cancer pathology and spell out their implications for cancer drug discovery and clinical application the authors identify and illuminate selected transcription factor oncoproteins and tumor suppressors together with nuclear proteins that are central to the phenotype of the tumor cell involved in chromatin control the emphasis is on new targets and approaches to cancer treatment derived from the cancer cell cycle gene control targets and angiogenesis

Targeting Cell Survival Pathways to Enhance Response to Chemotherapy

2018-03-28

targeting cell survival pathways to enhance response to chemotherapy encompasses recently developed molecular targeting agents and approaches that suppress cell survival signaling cell survival signaling attenuates the effectiveness of conventional chemotherapy and numerous mechanisms have been described and continue to be described which contribute to cell survival in the face of chemotherapy treatment key pathways leading to chemoresistance emanate from growth factor receptors pi3k stat3 anti apoptotic bcl 2 family members autophagy and the dna damage response pathway new advances have underscored the potential of targeting each of these cell survival mechanisms to improve responsiveness to chemotherapy this book reviews these recent advances and provides a foundational background and hints of new opportunities for basic translational and clinical investigators focused on improving therapeutic responses to chemotherapy presents cutting edge agents and approaches with proved success in different model systems that can be translated to a different type of cancer brings updated information to be used to propose new clinical trials investigating innovative strategies for improving responses to chemotherapy provides mechanistic details to help guide the design of laboratory studies associated with clinical trials

Chemotherapy and Surgery in Colon Cancer: for Better Treatment Outcomes

2022-04-29

this book focuses on the latest progress in chemotherapy for leukemia and related diseases including still ongoing but promising studies the effectiveness of treatment for chronic myeloid leukemia and acute promyelocytic leukemia has been dramatically improved in recent years this improvement has been made possible with the development of molecular targeted agents such as bcr abl tyrosine kinase inhibitors and all trans retinoic acid the antibody for the unique target of chemokine receptor 4 for adult t cell leukemia lymphoma or flt3 inhibitors signaling inhibitors has been applied to other leukemias also chemotherapeutic agents including antimetabolite analogues such as clofarabine and azacitidine an epigenetic regulator have undergone progressive development meanwhile the novel concept of therapy targeting leukemic stem cells has been developed the contributors discuss prospective results of basic and preclinical studies and clinical possibilities based on the effects for leukemic stem cells this work facilitates a comprehensive understanding of modern treatment methodology for leukemia the volume therefore will greatly benefit not only hematologists but also oncologists all physicians who specialize in blood cancer and pharmacologists who are involved in the development of therapeutic agents for leukemia

Chemotherapy for Leukemia

2017-04-17

in the chapters of this excellent text the authors have described advances in the neoadjuvant

chemotherapeutic management of a number of tumor types based on the extensive experience with this management concept in breast cancer several chapters are devoted to this important topic section 1 section 2 deals with the administration of neoadjuvant chemotherapy in non breast malignancies those who read and study the content of the chapters in this book will come away with a far greater understanding of the rationale supporting neoadjuvant chemotherapy the existing evidence based data regarding its use limitations of the approach and required future investigative efforts to learn how to optimize the benefits of this innovative management concept

Neoadjuvant Chemotherapy

2013-05-22

advances in chemotherapy volume 2 provides comprehensive and authoritative surveys of progress in all fields of experimental and applied chemotherapy this book is composed of six chapters and begins with a discussion on the chemical control of nematodes in plants and the chemistry biochemistry and anti infectious properties of cephalosporin group antibiotics the succeeding chapters describe the antineoplastic activity of olivomycin group antibiotics the chemotherapeutic action against malignancies of purines and pyrimidines and the specific relation of these structures to nucleic acids and cell nuclei which extends the range of activity of these compounds to viral and protozoan infections these topics are followed by a

presentation of the application of chemotherapy to neoplastic diseases of man with an emphasis on the complex field of drug response in acute leukemia the final chapters consider the special problems that are involved in the chemotherapy of tuberculosis as applied in developing countries particularly in india this book will be of value to chemists and medical biologists

Advances in Chemotherapy

2013-10-22

experimental chemotherapy v3

Experimental Chemotherapy

1964-01-01

this is the fourth volume of our series progress in anti cancer therapy for the past four years we have taken the challenge to select each year some of the most interesting topics on the wide field of oncology as usual this volume continues the tradition and covers five cancers breast prostate bladder lym phoma and ovarian the role of hiv and htlv in cancer as well as some deve lopmental pharmacology and behavioral issues this

year we have particularly focused our attention on one of the most common although rarely addressed cancer accounting for more than 315 000 newly diagnosed cases and 41 000 cancer related deaths annually landis sh et al 1999 prostate cancer five chapters address some of the issues concerning this disease the chapter by schroder describes the hopes and pitfalls of early detection of prostate cancer it reviews the literature on screening studies that have been performed both in the us and in europe these studies suggest that cancer mortality could be reduced by screening for prostate cancer mostly through psa testing however the effectiveness of early detection still needs to be definitely confirmed and ongoing randomized studies are described the results of which will probably help the medical community determine the worth of psa based screening for prostate cancer on the same hand the paper from von eschenbach is reviewing the clinical problems that are related this disease

Progress in Anti-Cancer Chemotherapy

2013-11-27

this book represents a comprehensive description and evaluation of the most up to date approaches to cancer management each chapter prepared by leading basic researchers and clinicians provides an in depth description of a specific method for cancer management the chemotherapy section of the book is updated to include the newest drugs as well as those currently in development organized by drug class this section

provides the latest information on most drugs including their mechanisms of action interactions with other agents toxicities side effects and mechanisms of resistance the biological therapy section of the book provides expanded coverage of the currently used cytokines vaccines and cell based therapies of cancer full consideration is also given to other modern treatment approaches such as tyrosine kinase inhibitors inhibitors of tumor angiogenesis and the transcatheter management of cancer current advances in hyperthermia in cancer treatment hematologic and nutritional support bone marrow transplantation pain management and care of the terminally ill patients with cancer are also presented in summary this book provides a comprehensive coverage of the current knowledge on the most innovative systematic and multidisciplinary approaches to the treatment of patients with cancer

Cancer Management in Man: Chemotherapy, Biological Therapy, Hyperthermia and Supporting Measures

2011-01-13

this book aims to address the infusion sequence of the main protocols used in the treatment of varied solid cancers since an inadequate infusion sequence can compromise the patient's treatment this work will provide support to professionals working in the field of oncology in assessing each chemotherapy infusion sequence the introductory chapters present the definition indication and the risks and benefits of

polypharmacy in cancer therapy and discuss the importance of drug combination in cancer treatment chapter 2 focuses on the challenges and also the toxicity of combination therapy in cancer while chapter 3 highlights the parameters that must be evaluated before defining the infusion sequence such as pharmacodynamic and pharmacokinetic profiles drugs stability when diluted or reconstituted toxicological profile of each drug among others the remaining chapters are divided by type of cancer the content is focused on solid tumors dividing the chapters according to breast gastrointestinal genitourinary gynecological head and neck lung and neurological cancers in each chapter the epidemiological profiles pathophysiology therapeutic modalities and the main chemotherapy protocols are addressed as well as efficacy studies and data on the infusion sequence of each mentioned protocol this work will be a valuable resource to physicians nurses and pharmacists and may help to improve health service practices

Chemotherapy Protocols and Infusion Sequence

2022-10-18

this book presents the proceedings of the second international congress on neo adjuvant chemotherapy which took place on 19 to 21 february 1988 in paris

Cancer Chemotherapy Reports

1975

this book includes some selected presentations given at the 3rd international congress on neo adjuvant chemotherapy which was held in paris from february 6th to february 9th 1991 it was attended by over 2000 physicians from around the world and by 700 nurses its organisation was saddened by the untimely death of professor claude jacquillat on october 12th 1990 it was further complicated in january and february 1991 by the gulf events which led some guests to cancel their participation however with the outstanding help of the two presidents cho sen by claude jacquillat before his death pierre banzet from paris and james f holland from new york the organizers could set up an exciting meeting confirming the impact of neo adjuvant chemotherapy on relatively new indications such as non small lung cancers bladder cancer esophageal cancer cervical cancer etc it is noteworthy that a contradictory debate on primary chemotherapy in non small lung cancer turned into a consensus conference in breast cancer the downstaging induced by primary chemotherapy is acknowledged by all and the conviction that jacquillat defended so heartily that breast preservation should be proposed to all patients with breast cancer whatever their tumour size is shared now by more and more people a special emphasis was given to new drugs new combination new access locoregional therapy and new developments such as that of growth factors and of interleukin 2

Neo-adjuvant Chemotherapy

1988

in this issue of surgical oncology clinics of north america guest editor mark krasna and colleagues discuss a wide range of topics devoted to lung cancer articles focus on pathology updated staging systems epidemiology of lung cancer smoking second hand smoke and genetics molecular markers for incidence prognosis and response to therapy screening diagnostic work up non invasive staging techniques surgical resection the role of surgery following induction therapy for stage iii nslc the role of adjuvant chemotherapy in nslc stages i iii and much more

Proceedings of the 3rd International Congress on Neo-Adjuvant Chemotherapy

2013-06-29

this book is comprised of reviews on the chemotherapy of mycobacterial infections as well as descriptions of established methods and new techniques for drug susceptibility testing some of the fascinating topics examined include the activity of conventional and experimental antimicrobial agents the rationale of drug

combinations in chemotherapy pharmacokinetics and the problems of drug susceptibility of mycobacteria analyzed using standards established in other fields of clinical microbiology any physician or researcher involved with the therapy of tuberculosis leprosy m avium in aids patients and other mycobacterial infections and drug susceptibility testing will discover a wealth of information in this comprehensive volume

Lung Cancer, An Issue of Surgical Oncology Clinics - E-Book

2011-11-01

maurie markman and a panel of distinguished clinicians and leading clinical investigators comprehensively review the current status of regional antineoplastic drug delivery in the management of malignant disease these authorities present a critical analysis of both the rationale and limitations of regional therapy and discuss potential clinical trials designed to explain the effectiveness of this method of therapy in special settings their presentations describe many exciting and innovative strategies for using regional drug delivery in anticancer therapy including coverage of such areas of special interest as colorectal skin lung pancreatic ovarian and gastrointestinal cancers comprehensive and authoritative regional chemotherapy clinical research and practice offers surgical and medical oncologists and clinical cancer investigators a gold standard review of the current role and future development of this increasingly powerful weapon in the

battle against cancer

Drug Susceptibility in the Chemotherapy of Mycobacterial Infections

1991-05-28

tuberculosis tb remains one of the major infectious diseases of mankind although drugs for its treatment have been available for nearly 60 years the standard short course 6 month regimen used since about 1980 has helped to save millions of lives but co infection with hiv has had a devastating effect on the epidemic and multidrug resistant tb is a growing problem particularly in communities with a high incidence of hiv following the declaration by the who in the early 1990s that tb was a global health emergency interest in tb research and the development of new drugs has increased significantly this volume reviews anti tb chemotherapy with the emphasis on the actions and pharmacology of existing drugs and the development and evaluation of new agents a close look is taken at new research regarding our existing drugs by some of the best known specialists in the field and historical aspects of these agents are reviewed from a modern perspective the prospects for the introduction of new drugs and different approaches of how to assess them in adults and in children are discussed in detail several papers address the problems associated with drug resistance its spread and diagnosis compiled by two editors from cape town which has a particularly high incidence of tb and is a centre of tuberculosis research this publication is an indispensable reference for

anyone involved in the management of tb either as a researcher clinician or administrator and those working in drug development

The Role of DNA Repair Pathways in Resistance to Chemotherapy and Radiotherapy in Cancer

2022-04-29

this book supplements other oncology nursing textbooks and provides hands on information to assist the nurse in providing comprehensive care to patients receiving chemotherapy and to their families the focus of the text is on the chemotherapeutic agents their side effects the corresponding nursing diagnoses and care plans and states methods of administration and handling of these drugs

How to Select Patients With Thoracic Cancers for Immunotherapy-Chemotherapy or Immunotherapy-Angiogenesis Inhibitor

Combinations?

2022-11-28

as in cancer chemotherapy 1 this volume brings to the reader highlights in three different areas of cancer therapeutics new concepts and models drug classes and clinical settings topics were chosen because of their timeliness or probable current impact in cancer treatment authors were selected on the basis of their ability to provide a critical overview of specific subjects and their involvement in original work i shall review the aims of this second volume and then elaborate on the scope of its contents the principal aim of the volumes on cancer chemotherapy in the cancer treatment and research series as stated in the preface to the first volume is to assemble in a concentrated form selected ingredients of chemotherapeutic progress these ingredients are to include concepts in therapeutic strategy pre clinical studies development of major classes of compounds identification of new directions and of landmarks of clinical progress thus we do not foresee overlap with series which provide an yearly update of chemotherapy in an encyclopedic manner or reviews of cancer chemotherapy unlike those publications our volumes are not intended to seek a place in shelves as a reference manual it is this editor's hope that persons representing various biomedical disciplines will seek the cancer treatment and research chemotherapy volumes to survey advances in the field at regular intervals

Conference on the Interaction of Radiation Therapy and Chemotherapy

1988

cancer chemotherapy frequently attacks the gastrointestinal tract many of the possible side effects reduce the patient's quality of life may limit acceptance of further drug administration and even life threatening complications must be considered this book is the proceedings of the falk workshop side effects of chemotherapy on the gastrointestinal tract pathogenesis and therapy held in freiburg germany on october 11 2002 part iv of the freiburg gastroenterology week chapters by pathologists pharmacologists oncologists and gastroenterologists will improve our understanding of the effects of anticancer agents on the organs of the gastrointestinal tract and help to compensate for chemotherapy induced adverse effects

Regional Chemotherapy

2000-01-02

this book provides the latest research and developments in the field of metronomic chemotherapy for breast cancer it presents the principles and mechanisms of metronomic chemotherapy preclinical and clinical studies and the latest developments in drug delivery systems and nanoformulations the clinical

pharmacology of metronomic chemotherapy including pharmacokinetics pharmacogenetics pharmacoeconomics and adverse drug reactions are also examined key features introduces metronomics therapy in the neoadjuvant and adjuvant treatment of breast cancer explores the potential of metronomics in terms of personalized chemotherapy present pharmacological bases of metronomic chemotherapy covers the latest developments in drug delivery systems nanotechnology and nanoformulations discusses antiangiogenic effects and the impact of metronomics on immunity this book is useful for students researchers oncologists pharmacologists and healthcare experts interested in understanding the clinical potential of metronomic chemotherapy in breast cancer

Antituberculosis Chemotherapy

2011

chemotherapy for cancer is in a state of evolution because some cancers can now be cured with chemotherapy as a singular modality this therapy can no longer be viewed as simply a palliative contribution chemotherapy has assumed an important role as an adjuvant to other modalities including both surgery and radiation therapy for some tumors the primary application of chemotherapy in a combined modality approach to curative therapy has resulted in the application of less radical surgery while achieving substantial of relatively rare tumors such as cure rates nonetheless with the exception childhood

tumors hematologic malignancies and testicular cancer the effectiveness of chemotherapy in most tumors is severely limited at the cellular level greater understanding of the specific mechanism of tumor cell killing and of the phenomenon of drug resistance are elusive critical ingredients in the improvement of effectiveness in cancer chemotherapy prolonging the exposure time of the tumor cell to drugs is a concept that was addressed in the early phases of the development of chemotherapy however technological limitations inhibited the broader application of chemotherapy by infusion until recent years also the convenience of intermittent therapy on an outpatient basis with the predominant theory of drug effect based on a dose response as well as the proven effectiveness of this schedule in some tumors has slowed the process of subjecting infusion chemotherapy to the rigors of clinical trials

Transactions of the Research Conference on Chemotherapy in Psychiatry

1960

includes free cd rom completely revised and updated for 2010 the physicians cancer chemotherapy drug manual is an up to date guide with the latest information on standard therapy and recent advances in chemotherapy written by world class experts in the clinical cancer therapeutics this essential reference provides a complete easy to use catalogue of over 100 drugs and commonly used drug regimens both on

and off label or the treatment of all major cancers

Cancer Chemotherapy Care Plans Handbook

2002

includes free cd rom completely revised and updated for 2007 this practical handbook is an up to date guide to all aspects of cancer chemotherapy the book provides a comprehensive easy to use catalogue of over 100 drugs both on and off label commonly used in cancer treatment including several new agents recently or about to be fda approved a section on common chemotherapy regimens provides a quick reference to management of specific cancers arranged alphabetically a comprehensively revised introductory chapter on principles of chemotherapy offers a concise current overview of the field special features include special chapter profiling anti emetic drugs diagrams of drug structures and pathways complete discussion of clinical pharmacology indications and dosages coverage of toxicity and interactions separate chapter on chemotherapy regimens for specific cancers overview of basic principles of cancer drug therapy easy to load and use cd rom version pda version of physicians cancer chemotherapy drug manual also available

Experimental and Clinical Progress in Cancer Chemotherapy

2012-12-06

scientists and clinicians attending the last new directions in antiviral therapy conference in late 1994 could hardly have predicted the revolution in the management of patients with hiv infection that has occurred since two new classes of antiretrovirals have been licensed the second site rt inhibitors and the protease inhibitors the long incubation period of active hiv infection when the infection is clinically latent is now understood to be a period of intense viral replication and turnover of cd4 lymphocytes measurements of hiv rna concentration in plasma have been shown to be essential tools for monitoring the course of hiv infection deciding when to treat and assessing the results of treatment and finally combinations of antiretrovirals particularly combinations including protease inhibitors have been shown to have dramatically beneficial effects on patients with hiv infection these advances coupled with new drugs for the management of herpesvirus infections have made dramatic differences in the quality and length of life of hiv infected patients additional advances have been made since 1994 in the prevention or management of influenza virus zanamavir respiratory syncytial virus palvzumab hepatitis b virus lamivudine and famciclovir and enterovirus infections pleconaril it is difficult to remember that only slightly more than a decade ago there were only a handful of antiviral agents available none of which were antiretrovirals and a number of those were either highly toxic of dubious efficacy or both

Side-effects of Cancer Chemotherapy on the Gastrointestinal Tract

2003-12-31

rare tumors are an increasing problem in oncology the main characteristic of rt is the low frequency of the event that determines difficult and sometimes late diagnosis and a great uncertainty in diagnosis and treatment the aim of this book is to offer a little help in spreading the knowledge of low incidence tumors in oncology in order to alert the nonexpert clinician to take them into consideration and to show the most accredited and updated medical treatment for some of the rare oncologic diseases this booklet is not conclusive but we hope to give help in prescribing treatments for the main rt underlining the need of a multidisciplinary approach in these tumors as well as cooperation with the centers of expertise each chapter provides brief information about the epidemiology and clinical aspects of rt and following each chemotherapy schedule we report a short description of the hematologic toxicities related to the treatment
