**A New Look At Thai Aids** 2004-12-01 following the detection of the first hiv infections in the early 1980s by the 1990s thailand was routinely depicted as having the world s fastest moving hiv aids epidemic however by the early 2000 s the bulk of scholarly and medical aids literature portrayed the epidemic as being largely under control and claimed that thai aids prevention efforts during the 1990s had been successful based on long term ethnographic research conducted in northern thailand this book makes an in depth study of the social construction of thailand s hiv aids epidemic over this period in addition to his own field research the author draws on an extensive corpus of english and thai language social science and medical hiv aids literature to examine the modeling of thailand s aids epidemic and addresses concepts and issues such as risk groups risk behaviour alcohol use gender and class masculinity the scapegoating of female prostitutes and men in the underclass the reporting of the hiv aids epidemic in thailand s indigenous thai language media and sexual activity amongst thai youth the analysis demonstrates the contribution of anthropology as an interpretative social science and the use of anthropological theory and research methods to finding alternative ways of framing the problems of thai aids and of posing new questions that will lead to more effective points of intervention it emphasises the necessity for critically reflexive approaches that question the taken for granted and demonstrates how qualitative research techniques guided by social theory have the potential to take account of local meanings in complex social contexts where traditional values and cultural practices are rapidly transforming due to economic and social change the book offers a sustained and powerful criticism of the limitations of the normative model of the thai aids epidemic and in its aim of promoting critically reflexive aids research techniques in order to produce a better understanding of issues on the ground and hence better health policy and more effective aids interventions speaks not only to the thai aids epidemic but to aids epidemics throughout southeast asia and elsewhere this is the only english language study of thailand s hiv aids epidemic to draw on long term qualitative research in northern thailand as well as on a broad range of thai and some khmer language materials its contextualised and subtly nuanced analysis of the aids epidemic and of the impact of aids control initiatives in concert with the theoretical and methodological contributions it makes to aids research and policy and behavioural interventions makes it a timely publication of vital interest to scholars in the social sciences as well as to the members of non governmental organisations and international organisations working in the hiv aids health and development fields

15 1981 in the light of intense international focus on ongoing forms of world poverty this book examines the potential of the concept of recognition in contemporary political philosophy to respond morally to this dire condition this book uses recognition theories to develop a two tiered response to the problem of global poverty first it highlights non degradation non humiliation and the avoidance of social suffering as essential components to the agency of the very poor this runs counter to liberal arguments that focus only on the deficit of basic material interests second even if universal conditions of agency are met many of the world s extreme poor may still suffer domination the book argues that empowering the world s poor to resist domination is an essential response to global poverty by conceiving poverty in terms of agency and empowerment this book highlights the transnational relevance of recognition theory to one of the most crucial problems affecting a rapidly globalising world global justice and recognition theory will be of interest to scholars and advanced students working in social and political philosophy political theory and global justice

*Hearings* 1976 euler is one of the greatest and most prolific mathematicians of all time he wrote the first accessible books on calculus created the theory of circular functions and discovered new areas of research such as elliptic integrals the calculus of variations graph theory divergent series and so on it took hundreds of years for his successors to develop in full the theories he began and some of his themes are still at the center of today s mathematics it is of great interest therefore to examine his work and its relation to current mathematics this book attempts to do that in number theory the discoveries he made empirically would require for their eventual understanding such sophisticated developments as the reciprocity laws and class field theory his pioneering work on elliptic integrals is the precursor of the modern theory of abelian functions and abelian integrals his evaluation of zeta and multizeta values is not only a fantastic and exciting story but very relevant to us because they are at the confluence of much research in algebraic geometry and number theory today chapters 2 and 3 of the book anticipating his successors by more than a century euler created a theory of summation of series that do not converge in the traditional manner chapter 5 of the book treats the

progression of ideas regarding divergent series from euler to many parts of modern analysis and quantum physics the last chapter contains a brief treatment of euler products euler discovered the product formula over the primes for the zeta function as well as for a small number of what are now called dirichlet L functions here the book goes into the development of the theory of such euler products and the role they play in number theory thus offering the reader a glimpse of current developments the langlands program

**Essays in Mathematical Economics, in Honor of Oskar Morgenstern** 2013-10-31 over the last two decades atomic force microscopy afm has undoubtedly had a considerable impact in unraveling the structures and dynamics of microbial surfaces with nanometer resolution and under physiological conditions moreover the continuous innovations in afm based modalities as well as the combination of afm with modern optical techniques such as confocal fluorescence microscopy or raman spectroscopy increased the diversity and volume of data that can be acquired in an experiment it is evident that these combinations provide new ways to investigate a broad spectrum of microbiological processes at the level of single cells in this book i have endeavored to highlight the wealth of afm based modalities that have been implemented over the recent years leading to the multiparametric and multifunctional

characterization of specifically bacterial surfaces examples include the real time imaging of the nanoscale organization of cell walls the quantification of subcellular chemical heterogeneities the mapping and functional analysis of individual cell wall constituents and the probing of the nanomechanical properties of living bacteria it is expected that in the near future more afm based modalities and complementary techniques will be combined into single experiments to address pertinent problems and challenges in microbial research such improvements may make it possible to address the dynamic nature of many more microbial cell surfaces and their constituents including the restructuring of cellular membranes pores and transporters signaling of cell membrane receptors and formation of cell adhesion complexes ultimately manifold discoveries and engineering possibilities will materialize as multiparametric tools allow systems of increasing complexity to be probed and manipulated

**People & Politics in Urban America** 2021-02-20 the primary purpose of this book is to depict the main features of the classical problem of universals in order to provide a better understanding of the various suggestions made by the moderns towards the solution of that problem the work is not historical however since knowledge of the history of the problem is essential for understanding the import of the new approach references are given to classical theories and interpretations are offered without any pretension that they are either exhaustive or final i have tried to argue that the problem though often appearing in metaphysical guise is in fact part of the more general problem of semantics i e the relation between words and the world the medieval theory that universals are the meaning of general words is linked here with a recent theory that the meaning of a word is explainable in terms of its function and not in terms of its putative denotation what comes of this fusion is this that if the medieval theory that universals are the meaning of general words is in any way credible then to know the meaning of such words requires close attention to their functions on the ground that words in general do not mirror the world rather they are tools used to change it
