Expanded and Revised* 2018-04-17 excerpt from beginner s guide to photography showing how to buy a camera and how to use it it is quite impossible to write down anything definite with regard to the length of time for which the lens must be uncovered if we had only one particular subject to photograph and this subject were always lighted by the same amount of daylight it would be an easy matter to calculate the

amount of exposure required with every diaphragm of a lens provided that the necessary amount had been ascertained by experiment with but one of those diaphragms for these stops or diaphragms as furnished with modern lenses have apertures bearing a definite relation to one another as a general rule each diaphragm will require double the exposure needed for the next size larger or to put it in another way suppose the smallest stop of a lens to require an exposure of 24 seconds with a given subject with the next size larger the exposure will be 12 then 6 then 3 then until we come to the full aperture of the lens by which the picture can be taken in of a second but as a matter of fact the exposure varies not only with the nature of the subject but with the time of day the time of year and the state of the atmosphere the old adage experientia can not be more aptly quoted than in connection with this question of exposure about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at [forgottenbooks.com](http://forgottenbooks.com) this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
