Preliminary Revision of the North

American Species of Echinocactus,

Cereus, and Opuntia

1896

based on 25 years of research that combed every historical and anthropological record of native american ways this unprecedented culinary dictionary documents the food uses of 1500 plants by 220 native american tribes from early times to the present like anthropologist daniel e moerman s previous volume native american medicinal plants this extensive compilation draws on the same research as his monumental native american ethnobotany this time culling 32 categories of food uses from an extraordinary range of species hundreds of plants both native and introduced are described the usage categories include beverages breads fruits spices desserts snacks dried foods and condiments as well as curdling agents dietary aids preservatives and even

foods specifically for emergencies each example of tribal use includes a brief description of how the food was prepared in addition multiple indexes are arranged by tribe type of food and common names to make it easy to pursue specific research an essential reference for anthropologists ethnobotanists and food scientists this will also make fascinating reading for anyone interested in the history of wild and cultivated local foods and the remarkable practical botanical knowledge of native american forbears

The Plant Information Network (PIN)

Data Base

1984

approximately 1500 scientists from around the globe participated in the international grassland congress at the university of kentucky in 1981 sharing existing knowledge of grasslands and exploring methods for increasing the productivity of livestock forage systems so as to better feed

mankind while maintaining or improvingenvironmental quality of the nearly 500 papers presented on previously unpublishedoriginal research or experimental research and development projects 273 were selectedfor inclusion in this book they cover the current basic and applied research on productionand utilization of forages from grasslands the world over

Native American Food Plants

2010-10-27

a comprehensive guide that includes a vast range of species and plant communities and employs thorough original keys based primarily on vegetative characteristics the keys don t require that flowers or other reproductive features be present like many plant guides and this guide s attention to woody plants as a whole allows one to identify a much greater variety of plants that especially suits an arid region such as utah with less diverse native trees woody plants are those

that have stems that persist above ground even through seasons that don t favor growth due to low precipitation or temperatures woody plants of utah employs dichotomous identification keys that are comparable to a game of twenty questions they work through a process of elimination by choosing sequential alternatives detailed illustrated plant descriptions complement the keys and provide additional botanical and environmental information in relation to a useful introductory categorization of utah plant communities supplementary tools include photos distribution maps and an illustrated glossary

Proceedings Of The Xiv International Grassland Congress

2019-09-16

this volume comprises the proceedings of the second international rangelands congress held in adelaide australia in may 1984 and includes some 350 contributions drawn from

43 different countries the congress addressed the problem of the conflict between land users and the degradation of this valuable resource some 40 of the earth s land surface is and or alpine and therefore unsuitable for agricultural cultivation collectively these lands are known as rangelands and in their natural state they constitute a habitat for grazing animals both domestic and wild despite their low productivity rangelands have been used for thousands of years as a source of food and fibre but other uses such as mining tourism recreation and conservation are exerting increasing demands the result is often conflict between land users and degradation of the resource

Woody Plants of Utah

2012-01-06

grasslands comprise the largest and most diverse set of ecosystems in the united states and are among the most extensive in the world characterized by scanty rainfall these western grasslands are too dry for crop production and are used almost exclusively for grazing livestock the grasslands on the western edge of the great plains known as the

Navajo Land Selection

1978

this book studies the application of green roofs in ecoregions of the western united states and canada while green roofs were intended to sustain local or regional vegetation this volume describes how green roofs in their modern form are typically planted with a low diversity mix of sedums from europe or asia the authors demonstrate how in the western usa and canada many green roofs have been designed with native plants and have been found to thrive part i of this book covers theory and an overview of ecoregions and their implications for green roofs in part ii vegetation from prairies deserts montane meadows coastal meadows and scrub and sub alpine habitats are explored on seventy three ecoregional green roofs case studies explore design concepts materials watering and maintenance wildlife plant species and lessons learned part iii covers an overview of ecoregional green roofs and a future outlook this book is aimed at professionals designers researchers students and educators with an interest in green roofs and the preservation of biodiversity

Lake Havasu Field Office, Resource Management Plan

2006

the most complete a to z reference guide to utilizing herbs for health and beauty the herbal bible every reference library should have on their shelf a much needed comprehensive reference guide to ensure the safe and effective use of herbs and their preparations millions of people use vitamins or herbs along with prescription drugs and over the counter otc medications find out which herbs and other nutritional supplements can help prescriptions work better or reduce

adverse reactions and which combinations are dangerous and should never be taken together separates fact from fiction concerning herbal medicine information on more than 400 botanicals ranging from well known herbs such as chamomile and ginseng to less familiar herbs such as kava and muirapuama botanical remedies that enhance the bodys ability to heal itself these safe non invasive therapies are proving to be more powerful than the often harmful drugs and surgeries that comprise the modern medicines of today appropriate precautions adverse reactions and possible prescription drug and over the counter otc interactions with the use of herbs and other nutritional supplements the only natural health reference book that is both comprehensive and user friendly

in 1916 anthropologist gilbert I wilson worked closely with buffalobird woman a highly respected hidatsa born in 1839 on the fort berthold reservation in western north dakota for a study of the hidatsas uses of local plants what resulted was a treasure trove of ethnobotanical information that was buried for more than seventy five years in wilson s archives now held jointly by the minnesota historical society and the american museum of natural history in new york city wilson recorded buffalobird woman s insightful and vivid descriptions of how the nineteenth century hidatsa people had gathered prepared and used the plants and wood in their local environment for food medicine smoking fiber fuel dye toys rituals and construction from courtship rituals that took place while gathering juneberries to descriptions of how the women kept young boys from stealing wild plums as they prepared them for use to recipes for preparing and cooking local plants

uses of plants by the hidatsas of the northern plains provides valuable details of hidatsa daily life during the nineteenth century

Rangelands: A Resource Under Siege

1986

regional silviculture of the united states 2nd edition john w barrett this is the only regional silviculture text now on the market it assesses the significant biological physical and economic qualities of forest regions in the continental u s and their effect on silviculture practices the first chapter provides an overview of the forests of the u s and introduces the topic of social and institutional constraints on silviculture subsequent chapters each deal with a specific forest region are written by a person intimately acquainted with the locality and follow a regular outline to provide cohesion and facilitate regional comparisons 1980 551 pp forest ecology 3rd edition stephen h spurr and burton v barnes the growing interest and

literature in this field created a need for a fresh updating of this classic text it remains a comprehensive yet highly readable account of real world forests including ecological aspects of successful forest management broad coverage embraces genetics and variation environmental factors site community relations ecosystem studies glacial forest history post settlement history compostition and succession 1980 687 pp wildlife biology 2nd edition raymond f dasmann this updated and revised edition of the standard introductory text brings together the principles of ecology and population biology and the practice of wildlife conservation and management it presents basic information on the value and present status of wild animal life including a history of human relationships with and attitudes toward wildlife examines wildlife within the context of ecosystems indicating why single species approaches to conservation and management often fail 1981 212 pp

Integrated Pest Management On

Rangeland

2019-04-08

the science of range management like many other resource disciplines has embraced and integrated environmental concerns in the field the laboratory and policy rangeland ecology and management now brings this integrated approach to the classroom in a thoroughly researched comprehensive and readable text the authors discuss the basics of ran
