State Capitalism 2016-03-08

the end of the cold war ushered in an age of american triumphalism best characterized by the washington consensus the idea that free markets democratic institutions limitations on government involvement in the economy and the rule of law were the foundations of prosperity and stability the last fifteen years starting with the asian financial crisis have seen the gradual erosion of that consensus many commentators have pointed to the emergence of a powerful new rival model state capitalism in state capitalist regimes the government typically owns firms in strategic industries not beholden to private sector shareholders such firms are allowed to operate with razor thin margins if the state deems them strategically important china soon to be the world s largest economy is the best known state capitalist regime but it is hardly the only one in state capitalism joshua kurlantzick ranges across the world china thailand brazil russia south africa turkey and more and argues that the increase in state capitalism across the globe has on balance contributed to a decline in democracy he isolates some of the reasons for state capitalism s resurgence the fact that globalization favors economies of scale in the most critical industries and the widespread rejection of the washington consensus in the face of the problems that have plagued the world economy in recent years that said a number of democratic nations have embraced state capitalism and in those regimes state backed firms like brazil s embraer have enjoyed considerable success kurlantzick highlights the mixed record and the evolving nature of the model yet he is more concerned about the negative effects of state capitalism when states control firms whether in democratic or authoritarian regimes the government increases its advantage over the rest of society the combination of new technologies the perceived failures of liberal economics and democracy in many developing nations the rise of modern kinds of authoritarians and the success of some of the best known state capitalists have created an era ripe for state intervention state capitalism offers the sharpest analysis yet of what state capitalism s emergence means for democratic politics around the world

private equity firms have long been at the center of public debates on the impact of the financial sector on main street companies are these firms financial innovators that save failing businesses or financial predators that bankrupt otherwise healthy companies and destroy jobs the first comprehensive examination of this topic private equity at work provides a detailed yet accessible guide to this controversial business model economist eileen appelbaum and professor rosemary batt carefully evaluate the evidence including original case studies and interviews legal documents bankruptcy proceedings media coverage and existing academic scholarship to demonstrate the effects of private equity on american businesses and workers they document that while private equity firms have had positive effects on the operations and growth of small and mid sized companies and in turning around failing companies the interventions of private equity more often than not lead to significant negative consequences for many businesses and workers prior research on private equity has focused almost exclusively on the financial performance of private equity funds and the returns to their investors private equity at work provides a new roadmap to the largely hidden internal operations of these firms showing how their business strategies disproportionately benefit the partners in private equity firms at the expense of other stakeholders and taxpayers in the 1980s leveraged buyouts by private equity firms saw high returns and were widely considered the solution to corporate wastefulness and mismanagement and since 2000 nearly 11 500 companies representing almost 8 million employees have been purchased by private equity firms as their role in the economy has increased they have come under fire from labor unions and community advocates who argue that the proliferation of leveraged buyouts destroys jobs causes wages to stagnate saddles otherwise healthy companies with debt and leads to subsidies from taxpayers appelbaum and batt show that private equity firms financial strategies are designed to extract maximum value from the companies they buy and sell often to the detriment of those companies and their employees and suppliers their risky decisions include buying companies and extracting dividends by loading them with high levels of debt and selling assets these actions often lead to financial distress and a disproportionate focus on cost cutting outsourcing and wage and benefit losses for workers especially if they are unionized because the law views private equity firms as investors rather than employers private equity owners are not held accountable for their actions in ways that public corporations are and their actions are not transparent because private equity owned companies are not regulated by the securities and exchange commission thus any debts or costs of bankruptcy incurred fall on businesses owned by private equity and their workers not the private equity firms that govern them for employees this often means loss of jobs health and pension benefits and retirement income appelbaum and batt conclude with a set of policy recommendations intended to curb the negative effects of private equity while preserving its constructive role in the economy these include policies to improve transparency and accountability as well as changes that would reduce the excessive use of financial engineering strategies by firms a groundbreaking analysis of a hotly contested business model private equity at work provides an unprecedented analysis of the little understood inner

the european economic crisis has been ongoing since 2008 and while austerity has spread over the continent it has failed to revive economies the media have played an important ideological role in presenting the policies of economic and political elites in a favourable light even if the latter s aim has been to shift the burden of adjustment onto citizens this book explains how and why using a critical political economic perspective and focusing on the case of ireland throughout ireland is compared with contemporary and historical examples to contextualise the arguments made the book covers the housing bubble that led to the crash the rescue of financial institutions by the state the role of the european institutions and the international monetary fund austerity and the possibility of leaving the eurozone for europe s peripheral countries through a systematic analysis of ireland s main newspapers it is argued that the media reflect elite views and interests and downplay alternative policies that could lead to more progressive responses to the crisis

the unprecedented progress of east asia pacific is a triumph of working people countries that were low income a generation ago successfully integrated into the global value chain exploiting their labor cost advantage in 1990 the region held about a third of the world s labor force leveraging this comparative advantage the share of global gdp of emerging economies in east asia pacific grew from 7 percent in 1992 to 17 percent in 2011 yet the region now finds itself at a critical juncture work and its contribution to growth and well being can no longer be taken for granted the challenges range from high youth inactivity and rising inequality to binding skills shortages a key underlying issue is economic informality which constrains innovation and productivity limits the tax base and increases household vulnerability to shocks informality is both a consequence of stringent labor regulations and limited enforcement capacity in several countries de jure employment regulations are more stringent than in many parts of europe even labor regulations set at reasonable levels but poorly implemented can aggravate the market failures they were designed to overcome this report argues that the appropriate policy responses are to ensure macroeconomic stability and in particular a regulatory framework that encourages small and medium sized enterprises where most people in the region work mainly agrarian countries should focus on raising agricultural productivity in urbanizing countries good urban planning becomes critical pacific island countries will need to provide youth with human capital needed to succeed abroad as migrant workers and across the region it is critical to formalize more work to increase the coverage of essential social protection and to sustain productivity to this end policies should encourage mobility of labor and human capital and not favor some forms of employment for instance full time wage employment in manufacturing over others either implicitly or explicitly policies to increase growth and well being from employment should instead reflect and support the dynamism and diversity of work forms across the region
