attachment trauma which addresses topics such as working with preverbal memories identifying ego states and regulating dissociation chronic pain or illness and culturally based traumatic events also included is a focused model of embodied self care to prevent compassion fatigue and burnout

Addiction Therapy and Treatment

2023-01-17

addiction is a national mental and medical health crisis responsible for untold costs to society and severe suffering to innumerable people yet addiction treatment as it is now practiced fails half the time the current treatment approach has changed little in the last 80 years and is a hodgepodge of often shady treatment approaches this book presents a radically different addiction treatment paradigm based on science evidence and best practices and has a success rate approaching 100 when followed closely this model should profoundly upend the current addiction treatment industry nearly every addict lives in a social system a family workplace or community that enables and supports often unconsciously the addict s addiction instead of the current addict focused approach this model extends treatment to the entire support system starting treatment with the concerned family members this model also proposes a single provider the family recovery therapist who manages treatment for the addict and the family from the first phone call through the first year of continuous sobriety this book offers simple recommendations to both addiction treatment providers and family members impacted by this disease it serves as a beacon of hope for families

Countertransference in the Treatment of PTSD

1994-03-10

this volume is the first book in the field of traumatic stress studies to systematically examine the unique role of countertransference processes in psychotherapy outcome emphasizing the need for carefully deliberated action this volume offers vital new insights into the victim healer relationship and presents detailed techniques to promote awareness of affective reactions for anyone working with sufferers of ptsd and its comorbid conditions such as anxiety depression and substance abuse

in recent years research on the pathogenesis of psychosomatic diseases has made significant progress for example franz alexander believes that unresolved subconscious conflicts are the main cause of psychosomatic disorders the subconscious psychological conflict is caused by the changes in the functional activities of the autonomic nervous system acting on the corresponding special organs and patients with susceptible qualities similarly mental and psychological factors affect gastrointestinal sensory and motor functions through the autonomic nervous system brain gut axis and neuroendocrine system meanwhile gastrointestinal symptoms also affect emotions and behaviors through the brain gut axis in addition the cannon bard theory of emotional physiology and pavlovian theory of higher neural activity types from quantitative research methods to study the relationship between conscious psychological factors such as emotions and measurable physiological and biochemical changes in clinical work the treatment of psychosomatic diseases has gradually shifted from emphasizing physical treatment to comprehensive treatment principles that is taking into account the psychological and behavioral aspects of the physical treatment of the primary disease the main purpose of physical treatment of the primary disease is to control or relieve symptoms to consolidate the treatment of psychosomatic diseases and reduce the recurrence of psychosomatic diseases combining physical therapy with necessary psychotherapy would potentially obtain a more comprehensive curative effect

PROBLEM GAMBLING AND ITS TREATMENT

2001-01-01

since the first edition of clinical manual for assessment and treatment of suicidal patients was published in 2005 advances have been made that increase our understanding of suicidal and self destructive behavior although clinicians cannot unerringly predict which patients will die by suicide they can focus more successfully on early identification of suicidal behavior and effective intervention and this new edition of the clinical manual thoroughly explores not only assessment of suicidality but what comes after an at risk patient has been identified the authors argue that treating specific psychiatric disorders is not enough to prevent suicide and they offer clinicians the necessary information and strategies to bridge that gap the authors main premise is that suicide is a dangerous and short term problem solving behavior designed to regulate or eliminate intense emotional pain a quick

2023-05-07 12/20 its all your fault a laypersons guide to personal liability how to insure

fix where a long term effective solution is needed and this understanding is the underpinning of the assessment and treatment strategies the authors recommend the content of this new edition has been thoroughly reviewed and revised and substantive changes have been made to specific chapters to ensure that the book represents the most current thinking and research while retaining the strengths of the previous edition the chapter on assessment has been revised to put the fundamental components of effective treatment in a clinical case oriented context and includes an easy to use assessment protocol that allows clinicians to determine where individual patients stand on seven dimensions cognitive rigidity problem solving deficits heightened mental pain emotionally avoidant coping style interpersonal deficits self control deficits and environmental stress and social support deficits the many issues involved in the use of psychotropic medications in suicidal patients are addressed in a new chapter which includes information on the relevant classes of drugs such as antidepressants and anti-anxiety agents and the issues that may arise with their use including side effects degree of lethality and tendency to aggravate suicidality on introduction and withdrawal of the medication the chapter on special populations has been expanded to include adolescents elders and patients with co-occurring substance abuse or psychosis because of additional vulnerabilities treating these groups may call for the use of added or special techniques to ensure the best therapeutic outcomes primary care physicians are the first point of contact for many patients and they may require additional preparation in order to assess and respond to those experiencing suicidal thoughts the chapter suicidal patients in primary care explores strategies for screening recognizing and assessing risk treating the initial crisis and developing a crisis management plan tips for success appear at intervals and the essentials are included at the end of each chapter highlighting the most important concepts in addition there are scores of helpful charts and exercises practical accessible and reader friendly the clinical manual for assessment and treatment of suicidal patients is not an academic book but rather is one designed to become an indispensable part of clinicians working libraries

this book reviews the significant advances in our understanding of glioma biology that have been achieved during the past decade and describes in detail the resultant new approaches to treatment. Improvements in surgical techniques, radiation therapy, and chemotherapy are comprehensively covered with discussion of their impact in decreasing patient morbidity and increasing survival. In addition, individual chapters are devoted specifically to current treatment for low-grade gliomas, anaplastic gliomas, and glioblastoma multiforme. Other topics addressed include treatment of the elderly patient, investigating emerging therapies from small molecules to immunotherapy and palliative care. This timely book will be a valuable source of up-to-date information for practitioners and will also be of interest to researchers.

Nutrition in the Prevention and Treatment of Disease

2008-03-28

nanotechnology has revolutionized cancer diagnosis and therapy through targeted drug delivery. Advances in protein engineering and materials science have led to the development of nanocarriers, which have helped overcome the challenges faced during conventional cancer treatment. These nanocarriers serve as an efficient transport module for drugs. Nano drug delivery has emerged as a promising technology that results in early detection and better treatment of various cancers. The approved nanoparticles currently used in cancer treatment strategies include liposomes, dendrimers, polyplexes, solid lipid nano carriers, etc. These nanocarriers can potentially provide a quick, safe, and cost-effective method in cancer therapy and management. This book presents thirteen chapters that cover cancer nanotherapeutics for various cancers. The reference covers lung, breast, cervical, ovarian, colon, prostate, and head and neck cancers. Each chapter reviews advanced data from existing and ongoing clinical research and major regulatory considerations. A list of scientific references is provided for further reading.
