successfully there are three more chapters that expand further on the topics of bernoulli numbers differential equations and metric spaces each chapter has a summary of basic points in which some fundamental definitions and results are prepared this also contains many brief historical comments for some significant mathematical results in real analysis together with many references problems and solutions in real analysis can be treated as a collection of advanced exercises by undergraduate students during or after their courses of calculus and linear algebra it is also instructive for graduate students who are interested in analytic number theory readers will also be able to completely grasp a simple and elementary proof of the prime number theorem through several exercises this any book on solved problems would be welcome by the students as they dread the unsolved problems the most problems and solutions in advanced accountancy vol i and ii is the result of realization of the same fact however this book will serve its purpose the best if before referring to it the students have attempted to solve the questions on their own the book has been designed specially to serve as a complementary set to the textbook advanced accountancy vol i and ii authored by the same team as dr s n maheshwari and dr s k maheshwari it contains detailed solutions to all the practical problems given at the end of each chapter in advanced accountancy as also solutions to the problems set at the recent university and professional examinations special feature of the book is that the problems have been properly graded latex edition this work forms a key or companion to the higher algebra and contains full solutions of nearly all the examples in many cases more than one solution is given while throughout the book frequent reference is made to the text and illustrative examples in the algebra the work has been undertaken at the request of many teachers who have introduced the algebra into their classes and for such readers it is mainly intended but it is hoped that if judiciously used the solutions may also be found serviceable by that large and increasing class of students who read mathematics without the assistance of a teacher in this edition the entire manuscript was typeset using the latex document processing system originally developed by leslie lamport based on tex typesetting system created by donald knuth the typesetting software used the xelatex distribution we are grateful for this opportunity to put the materials into a consistent format and to correct errors in the original publication that have come to our attention most of the hard work

of preparing this edition was accomplished by neeru singh who expertly keyboarded and edited the text of the original manuscript she helped us put hundreds of pages of typographically difficult material into a consistent digital format we are highly indebted to pratham kumar singh for the fruitful discussions which led to the idea of masterminding this entire project the process of compiling this book has given us an incentive to improve the layout to doublecheck almost all of the mathematical rendering to correct all known errors to improve the original illustrations by redrawing them with till tantau s marvelous tikz thus the book now appears in a form that we hope will remain useful for at least another generation
