pressing need to know about technical writing but don t know whom to ask or where to look the technical writer s and editor s handbook provides a quick and easy way to answer your questions author tom wetzel draws from actual experiences of a successful technical writing career to explain the differences in various technical writing professions and the practical tools of the working technical writer s trade and their applications short quickly digestible and illustrated chapters support the development of technical proposals training literature magazine articles technical advertisements and press releases as well as technical manuals and users guides among other technical documentation a practical day to day working tool this guide and reference is an essential for the personal library of all practicing technical writers and other technical professionals including a centslogisticians a centstechnicians a centsengineers a centsmanagers a centsstudents one of the most significant developments in computing over the last ten years has been the growth of interest in computer based support for people working together recognition that much work done in offices is essentially group work has led to the emergence of a distinct subfield of computer science under the title computer supported cooperative work cscw since the term was first coined in 1984 there has been growing awareness of the relevance to the field of and the valuable con tributions to be made by non computing disciplines such as sociology management science social psychology and anthro pology this volume addresses design issues in cscw an since this topic crucially involves human as well as technical considerations brings together researchers from such a broad range of disciplines most of the chapters in this volume were originally presented as papers at the one day seminar design issues in cscw held at the department of trade and industry dti london on 17 march 1992 one in aseries of dti supported cscw sig seminars we would like to express our gratitude to the series editors colston sanger and dan diaper for their useful comments on and suggestions for revisions to the final draft of the manuscript to linda schofield our editor at springer for her continued encouragement throughout the preparation of the manuscript and finally to our respective families for their support and patience over so many months in order to gain accreditation every laboratory must have a superior quality assurance program the keys to a successful program are the operational and technical manuals and associated documents which define the program and its various components written by experts with global experience in setting up laboratories implementing quality in laboratory policies and processes using templates project management and six sigma provides templates for the various policies procedures and forms that should be contained in the quality assurance operational and technical manuals of a laboratory seeking accreditation templates for the entire project life cycle the book begins with a general introduction and overview of quality assurance and then moves

on to cover implementation strategies it contains best practices and templates for the project management of the design and implementation of the laboratory operational and technical manuals required to establish a quality assurance program the templates span the entire project life cycle from initiation to planning to execution to monitoring and finally to closure the book also examines how six sigma concepts can be used to optimize laboratories and contains templates that cover administrative issues quality assurance sample control and health and safety issues in addition there is a section of criteria files that relate the individual document templates to specific accreditation criterion addresses the standards of iso 17025 the results of any laboratory examination have the potential to be presented in court and can ultimately affect the life and liberty of the parties involved therefore a stringent quality assurance program including well documented policies and a procedure manual is essential ensuring that laboratories meet the standards of iso 17025 this volume is a critical component of any laboratory s accreditation process ag module 1 navedtra 14269 surface weather observations this module covers the basic procedures that are involved with conducting surface weather observations it begins with a discussion of surface observation elements followed by a description of primary and backup observation equipment that is used aboard ships and at shore stations module 1 also includes a complete explanation of how to record and encode surface metar observations using wmo and navmetoccom guidelines the module concludes with a description of wmo plotting models and procedures ag module 2 navedtra 14270 miscellaneous observations and codes this module concentrates on the observation procedures equipment and codes associated with upper air observations and bathythermograph observations module 2 also discusses aviation weather codes such as tafs and pireps and includes a chapter on surf observation procedures radiological fallout and chemical contamination plotting procedures are also explained ag module 3 navedtra 14271 environmental satellites and weather radar this module describes the various type of environmental satellites satellite imagery and associated terminology it also discusses satellite receiving equipment in addition module 3 contains information on the weather surveillance radar 1988 doppler wsr 88d it includes a discussion of electromagnetic energy and radar propagation theory and explains the basic principles of doppler radar the module also describes the configuration and operation of the wsr 88d as well as wsr 88d products ag module 4 navedtra 14272 environmental communications and administration this module covers several of the most widely used environmental communications systems within the metoc community it also describes the software programs and products associated with these systems the module concludes with a discussion of basic administration procedures
