principles of chemistry uses a mastery learning paradigm designed to bring students to a excellent grasp of concepts and skills the author s conversational style is a favorite with students and combined with a special skill for lucidity and detail this text is what has been sorely missing from education students also appreciate the smaller profile and lighter weight of our books something everyone notices immediately this is possible because of the text covers an amount that can reasonably be covered in one year rather than being stuffed with unnecessary chapters the history of modern chemistry mathematics and technical communication is emphasized throughout to effect the integration of chemistry with other subjects integration preserves a course from feeling compartmentalized and not relevant to other subjects that s certainly not how the real world is real chemists use math and writing skills and their field is greatly enhanced by their knowledge of the lineage of great scientists upon whose shoulders they stand all centripetal press texts are rigorously reviewed and vetted by professional scientists this text is recommended for students with a minimum math competency of algebra ii due to the appearance of logarithmic calculation when learning about ph values otherwise math skills only involve basic formula solutions companion resources for general chemistry principles of chemistry solutions manual for worked out answers to all calculation problems principles of chemistry resource cd includes chapter tests answer keys and other resources chemistry experiments for high school students contains complete instructions and materials lists for 20 experiments chemistry experiments for high school at home for environments that do not have access to a laboratory the student lab report handbook a concise guide to writing premier lab reports for high school and undergraduate studies

there is no need in the 1970s to explain the writing of a book on environmental chemistry the despoliation of the environment by man's activities has long been clear to chemists however it has been the subject of public debate for a short time since the late 1960s curiously there has been little reaction in the textbook literature to reflect this concern apart from some brief and sketchy

paperbacks for schools there has not yet been published a substantial review of environmental chemistry one reason for this is the breadth of the chemistry involved it could scarcely be covered by one or two authors for it is as wide as chemistry itself the ideal way to write such a book would be to gather a couple of dozen authors in one place and keep them together for 6 months of discussions and writing this not being very practical it was decided to do the next best thing and to attempt to network a number of men together in mutual correspondence and interaction which would lead to a book that had the advantages of the expertise of a large number of persons and lacked many of the usual disadvantages of the multi author book thus synopses of the various articles were sent to each author and they were encouraged to interact with each other in attempting to avoid repetition and in keeping their symbols uniform and their presentation style coordinated
