personalized psychiatry presents the first book to explore this novel field of biological psychiatry that covers both basic science research and its translational applications the book conceptualizes personalized psychiatry and provides state of the art knowledge on biological and neuroscience methodologies all while integrating clinical phenomenology relevant to personalized psychiatry and discussing important principles and potential models it is essential reading for advanced students and neuroscience and psychiatry researchers who are investigating the prevention and treatment of mental disorders

combines neurobiology with basic science methodologies in genomics epigenomics and transcriptomics demonstrates how the statistical modeling of interacting biological and clinical information could transform the future of psychiatry addresses fundamental questions and requirements for personalized psychiatry from a basic research and translational perspective

arthropod vector controller of disease transmission volume 2 vector saliva host pathogen interactions is built on topics initially raised at a related keystone symposium on arthropod vectors together with the separate related volume 1 controller of disease transmission this work presents a logical sequence of topic development that leads to regulatory considerations for advancing these and related concepts for developing novel control measures the three themes of symbionts vector immune defenses and arthropod saliva modulation of the host environment are central to the concept of determinants of vector competence that involves all aspects of vector borne pathogen development within the arthropod that culminates in the successful transmission to the vertebrate host these three areas are characterized at the present time by rapid achievement of significant incremental insights which advances our understanding for a wide variety of arthropod vector species and this work is the first to extensively integrate these themes provides overviews of host defenses encountered by the blood feeding arthropod vector at the cutaneous interface addresses how these defenses are modulated by the vector specific functions of vector saliva components host response to vector borne infectious agents and how vector borne pathogens themselves modulate host defenses features expertly curated topics to ensure appropriate scope of coverage and aid integration of concepts and content across chapters can severe mental illness be prevented by early intervention mental illness is highly prevalent in the general population and has its onset mostly in adolescence and young adulthood early intervention usually leads to improved prognosis this book describes a newly developed evidence based cognitive behavioural intervention that can be used by clinicians to treat the precursor symptoms of psychosis and other severe mental illness cbt for those at risk of

a first episode psychosis offers a detailed new psychotherapy that has been shown to reduce the chance of transition to a first psychotic episode and to improve the chance for recovery this encompasses psycho education about prepsychotic symptoms a review of literature about psychological processes that are known to play a role in the development of psychosis a comprehensive manual illustrated by numerous clinical vignettes that can be used to treat help seeking subjects with an increased risk of developing psychosis links to online resources and exercises to be used in therapy and education a description of the multicentre randomized clinical trial investigating this new psychotherapy the vast collective experience and expertise of the authors of this handbook results in an invaluable text for clinicians working in mental health care as well as students lecturers and researchers who have an interest in the prevention of schizophrenia and other severe mental illness as key links in transportation and supply chains the effect of climate change on seaports has broad implications for the development prospects of the global economy however the picture is very uncertain because the impacts of climate change will be felt very differently around the world both positively and negatively this book addresses the need for quality theoretical analysis highly innovative assessment methodologies and insightful empirical global experiences so as to identify the best international practices planning and appropriate policies to effectively adapt to develop resilience and indeed benefit from the impacts posed by climate change on transportation and supply chains this book comprises of theories methodologies and case studies from five continents asia europe latin america north america and oceania addressing climate change and the adaptation planning of ports and transportation infrastructures with reputable contributors from academic policymaking and professional sectors it critically analyses the recent attempts by ports in establishing adaptation plans and strategies so to enhance ports and other transportation infrastructures resilience to the climate change risks this is the first book of its kind to focus on climate change adaptation for ports it offers useful and comprehensive guidance to senior policymakers industrial practitioners and researchers who are eager to understand the dynamics between climate change adaptation planning of ports and transportation infrastructures everyone cares about positive emotion and what makes us happy but do we really know both sides of the story about our most treasured feelings this comprehensive volume provides the first account of the light and the dark sides of positive emotion and how they can help us and sometimes even hurt us emotions are a cardinal component of everyday life affecting one's ability to function in an adaptive manner and influencing both intrapersonal and interpersonal processes such as self esteem and relationship satisfaction however when emotions are overpowering they can become debilitating and intrusive in daily life in general emotion regulation competencies become differentiated as a function of development children tend to seek support from adults or use behavioral techniques to regulate their emotions as children reach adolescence they become increasingly self reliant engaging in playful problem solving and utilizing cognitive strategies for example reappraisal more frequently when faced with stressful life events while the majority of children and adolescents will successfully navigate these developmental stages by cultivating adaptive coping skills for some this marks the beginning of lifelong challenges with emotion regulation and resultant dysregulation this book provides a guide to dealing with these problems with contributions from leading experts in the field divided into 4 sections it starts by providing an introduction to the field of emotion regulation in adolescents touching upon the cultural social biological and developmental issues related to this topic section two discusses several psychological disorders impacting adolescents such as anxiety depression and conduct problems while also discussing the underlying role emotion regulation plays in the development maintenance and propagation of these disorders in addition this section considers the implication for treatment by discussing the latest evidence based intervention approaches the third section focuses on the role of emotion regulation in specific behaviour populations such as children of abuse and neglect as well as adolescents who engage in nonsuicidal self injury the final section includes an epilogue discussing emergent areas of research answering questions of a theoretical psychological and empirical nature for

all those working in the field of mental health whether novice or experienced the book provides a valuable guide to understanding and treating these increasingly common problems e rehabilitation in mainland china f rehabilitation in hong kong g rehabilitation in brazil h rehabilitation in argentina i rehabilitation in south africa j rehabilitation in botswana section seven evaluation and general conclusions 42 outcome measures 43 avoiding bias in evaluating rehabilitation 44 challenges in the evaluation of neuropsychological rehabilitation effects 45 summary and guidelines for neuropsychological rehabilitation index providing a comprehensive survey of cutting edge scholarship in the field of german indian and south asian studies the book looks at the history of german indian relations in the spheres of culture politics and intellectual life combining transnational post colonial and comparative approaches it includes the entire twentieth century from the first world war and weimar republic to the third reich and cold war era the book first examines the ways in which nineteenth century indomania figured in the creation of both german national identity and modern german scholarship on the orient and it illustrates how german encounters with india in the imperial era alternately destabilized and reinforced the orientalist capitalist and nationalist underpinnings of german modernity contributors discuss the full range of german responses to india and south asian perceptions of germany against the backdrop of war and socio political revolution as well as the third reich s ambivalent perceptions of india in the context of racism religion and occultism the book concludes by exploring german indian relations in the era of decolonization and the cold war employing a diverse array of interdisciplinary approaches to understanding german indian encounters over the past two centuries this book is of interest to students and scholars of germany india europe and asia as well as history political science anthropology philosophy comparative literature and religious studies pierre bourdieu was one of the most influential social thinkers of the past half century known for both his theoretical and methodological contributions and his wide ranging empirical investigations into colonial power in algeria the educational system in france the forms of state power and the history of artistic and scientific fields among many other topics despite the depth and breadth of his influence however bourdieu s legacy has yet to be assessed in a comprehensive manner the oxford handbook of pierre bourdieu fills this gap by offering a sweeping overview of bourdieu s impact on the social sciences and humanities thomas medvetz and jeffrey j sallaz have gathered a diverse array of leading scholars who place bourdieu s work in the wider scope of intellectual history trace the development of his thought offer original interpretations and critical engagement and discuss the likely impact of his ideas on future social research the handbook highlights bourdieu s contributions to established areas of research including the study of markets the law cultural production and politics and illustrates how his concepts have generated new fields and objects of study this book review series presents current trends in modern biotechnology the aim is to cover all aspects of this interdisciplinary technology where knowledge methods and expertise are required from chemistry biochemistry microbiology genetics chemical engineering and computer science volumes are organized topically and provide a comprehensive discussion of developments in the respective field over the past 3 5 years the series also discusses new discoveries and applications special volumes are dedicated to selected topics which focus on new biotechnological products and new processes for their synthesis and purification in general special volumes are edited by well known guest editors the series editor and publisher will however always be pleased to receive suggestions and supplementary information manuscripts are accepted in english climate change cc is currently an unquestionable phenomenon if not stopped it will be catastrophic for life on earth scientific evidence shows that human activities are the primary driver of cc tendencies since the industrial times in this book we present the relationship between development and cc with special reference to agriculture the rural sector and policies aimed to promote sustainable development we also give special attention to the situation in low and medium income countries particularly rural households and small farmers in these countries the study of agriculture cc and sustainability requires consideration of natural resources and their uses land freshwater forests etc as well as the rural sector

since land for agricultural production often expands at the expense of forests in addition the use of water for agricultural production affects the availability of this resource for other uses in the urban industrial and service sectors consequently sustainable agricultural development under cc requires an interdisciplinary or at least a multidisciplinary approach in this book we do our best to deal with this challenge by focusing on issues and topics related to agriculture and its use of natural resources in the context of cc but without ignoring the interrelations of these phenomena with further aspects of sustainability beyond agriculture this book is for individuals with mild cognitive impairment mci their loved ones and health care professionals who care for these patients the text is loaded with up to date scientifically substantiated knowledge about what mci is how it affects people and how to take a proactive approach to health and wellbeing for living with mci house x is by far the largest and best appointed of the minoan houses excavated at kommos in south central crete a minoan harbor and settlement that later became the site of a greek sanctuary situated on the seacoast of the western mesara plain kommos faces west toward the libyan sea house x stands on the southern edge of the minoan town separated by a large slab paved road from the monumental civic buildings built and used between the protopalatial and postpalatial periods the description of the stratigraphic excavation of this elite house is published with numerous architectural plans along with the cataloged small finds and tables of data on the floral and faunal materials the excavated fresco fragments are also discussed and illustrated this volume presents the late bronze age pottery from in and around house x a large minoan house at kommos situated not far from the sea in south central crete this volume is richly illustrated with drawings photos and tables of data rutter s contribution complements the publication of the architecture stratigraphy and small finds in part 1 shaw and shaw eds 2012 together this pair of volumes offers a conclusion to a series of monographs volumes i v previously published about the site shaw and shaw eds 1995 2006 the kommos series is now completed by the two volume publication on house x this second edition provides updated and new chapters to build on and extend the strengths of the first edition chapters guide readers through basic biology of basophils obtaining the cells by purification culture of stem cells progenitors peripheral cd34 stem cell derived mast cells basophils from cd34 progenitors diagnostic applications gene expression patterns in basophils roles of basophils in different asthma phenotypes knockout and disease models written in the highly successful methods in molecular biology series format chapters include introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls authoritative and cutting edge basophils and mast cells methods and protocols second edition aims to ensure successful results in the further study of this vital field

this book examines in detail the diagnostic approach to manic depressive bipolar illness with special reference to the borderline zones with unipolar depression and schizoaffective disorder among other diagnostic issues considered are mixed episodes often misdiagnosed by psychiatrists rapid cycling and the confusion with personality disorders within the context of diagnosis and understanding of the dynamics of bipolar disorder temperament character and personality are all extensively discussed neurocognitive deficit and disability are covered as are elements of evolutionary biology and behavior with regard to treatment the major focus is on evidence based therapy with reference to the results of randomized controlled trials and meta analyses in addition contemporary guidelines and future trends are examined careful consideration is also given to the psychosocial treatment approach and issues relating to societal and economic costs and burdens

The Psychology of Implicit Emotion Regulation

2012-12-06

emotion regulation has traditionally been conceived as a deliberative process but there is growing evidence that many emotion regulation processes operate at implicit levels implicit emotion regulation is initiated automatically without conscious intention and aims at modifying the quality of emotional responding this special issue showcases recent advances in theorizing and empirical research on implicit emotion regulation implicit emotion regulation is pervasive in everyday life and contributes considerably to the effectiveness of emotion regulation the contributions to this special issue highlight the significance of implicit emotion regulation in psychological adaptation goal directed behavior interpersonal behavior personality functioning and mental health

emotions are a cardinal component of everyday life affecting one s ability to function in an adaptive manner and influencing both intrapersonal and interpersonal processes such as self esteem and relationship satisfaction however when emotions are

overpowering they can become debilitating and intrusive in daily life in general emotion regulation competencies become differentiated as a function of development children tend to seek support from adults or use behavioral techniques to regulate their emotions as children reach adolescence they become increasingly self reliant engaging in playful problem solving and utilizing cognitive strategies for example reappraisal more frequently when faced with stressful life events while the majority of children and adolescents will successfully navigate these developmental stages by cultivating adaptive coping skills for some this marks the beginning of lifelong challenges with emotion regulation and resultant dysregulation this book provides a guide to dealing with these problems with contributions from leading experts in the field divided into 4 sections it starts by providing an introduction to the field of emotion regulation in adolescents touching upon the cultural social biological and developmental issues related to this topic section two discusses several psychological disorders impacting adolescents such as anxiety depression and conduct problems while also discussing the underlying role emotion regulation plays in the development maintenance and propagation of these disorders in addition this section considers the implication for treatment by discussing the latest evidence based intervention approaches the third section focuses on the role of emotion regulation in specific behaviour populations such as children of abuse and neglect as well as adolescents who engage in nonsuicidal self injury the final section includes an epilogue discussing emergent areas of research answering questions of a theoretical psychological and empirical nature for all those working in the field of mental health whether novice or experienced the book provides a valuable guide to understanding and treating these increasingly common problems

climate change cc is currently an unquestionable phenomenon if not stopped it will be catastrophic for life on earth scientific evidence shows that human activities are the primary driver of cc tendencies since the industrial times in this book we present the relationship between development and cc with special reference to agriculture the rural sector and policies aimed to promote sustainable development we also give special attention to the situation in low and medium income countries particularly rural households and small farmers in these countries the study of agriculture cc and sustainability requires consideration of natural resources and their uses land freshwater forests etc as well as the rural sector since land for agricultural production often expands at the expense of forests in addition the use of water for agricultural production affects

the availability of this resource for other uses in the urban industrial and service sectors consequently sustainable agricultural development under cc requires an interdisciplinary or at least a multidisciplinary approach in this book we do our best to deal with this challenge by focusing on issues and topics related to agriculture and its use of natural resources in the context of cc but without ignoring the interrelations of these phenomena with further aspects of sustainability beyond agriculture
