Il paziente cardiocirurgico. Management clinico-assistenziale 2009

my research consists of the processing of signals from the 14 electrodes of the emotiv system connected to immersive glasses that allow a realistic visual experience and investigate the brainnetwork in order to identify the signals features corresponding to different perceptive and cognitivestimuli a matlab simulink procedure synchronizes the acquired signals with various sensoryexperiences presented in a video aim of the research is to test the interconnections among brain areas in presence of sensory andemotional stimuli and show how similar stimuli give rise to chaotic attractors identified withidentical or similar codes the chaotic attractors can be definite as a trajectory of the dynamical system contained in a finitevolume of phase space a dynamical system can have chaotic behavior i e an organized but notperiodic behaviour sensitive to the initial conditions in this work a custom ann itsom processes individual signals or many signalssimultaneously the sequence of the itsom winning nodes tends to repeat itself creating a timeseries of chaotic attractors the itsom attributes similar codes to attractors emerging from similar brain states perceptionsand emotions such attractors are isomorphic to the attractors in which the corresponding dynamic system thesignal time series is evolving and characterize univocally the input element that produces them ifthe attractors are chaotic this means that the signals are individually self organized or examiningmore signals together there is a form of coherence between signals

the book presents an innovative technology based on injection of a very weak current to trace the quantity of a drug carried immediately after the administration the book makes the reader familiar with the technology from the conception through the design of the instrument up to the preliminary clinical applications in the first chapter the method of transdermal drug delivery and the use of impedance spectroscopy in the dermatological field are presented the second chapter describes a screening measurement campaign aimed at proving the feasibility of the assessment method and identifying the bandwidth of interest the prototyping validation and characterization of an instrument to measure the amount of drug delivered dusrm drug under skin meter are presented in chapter three in the fourth chapter three experimental campaigns based on the electrical analysis of the biological tissue behavior due to the drug delivery are reported i laboratory emulation on eggplants ii ex vivo tests on pig ears and finally iii in vivo tests on human volunteers in the fifth chapter a behavioral model based on finite elements and partial differential equation of an impedance based measurement system for assessing the drug released under

the skin during transdermal delivering is proposed the last chapter is dedicated to present a campaign in order to prove the suitability for insulin therapy applications this book is intended for biomedical engineers biomedical engineering students operators working in the field of biomedical instrumentation biotechnologists and technicians of transdermal vehiculation

the active points test is a clinical instrument for identifying and selecting the points on the skin that are most effective for treatment these points may be close to the seat of the disease for example on the shoulder for periarthrititis or far away for example on the ear or head for stomach pain or a cough drawing on principles from tcm and western medicine dr stefano marcelli sets out the theory of the approach and offers detailed guidance on how to carry out the test and how to interpret the results as well as explaining how the test can be used in different therapies the test is based on the discovery that a patient experiencing an ongoing symptom can be made aware of the capacity of a few points on the skin to treat his or her discomfort the test involves stimulating the skin to the appropriate degree whilst asking the patient to identify whether there is any change in the symptom he or she is suffering and can be used to treat a wide range of symptoms from articular pain to migraine tachycardia asthenia and depression published for the first time in 1995 this substantially updated edition contains the most recent supporting evidence and many new explanatory diagrams and photographs providing a comprehensive and effective system for point selection this is essential reading for practitioners and students of acupuncture and related reflex and manual therapies including massage tuina shiatsu and rolfing
