this self contained book focuses on the safety assessment of existing structures subjected to multi hazard scenarios through advanced numerical methods whereas the focus is on concrete dams and nuclear containment structures the presented methodologies can also be applied to other large scale ones the authors explains how aging and shaking ultimately lead to cracking and how these complexities are compounded by their random nature nonlinear static and transient finite element analysis is hence integrated with both earthquake engineering and probabilistic methods to ultimately derive capacity or fragility curves through a rigorous safety assessment expanding its focus beyond design aspects or the state of the practice i e codes this book is composed of seven sections fundamentals theoretical coverage of solid mechnics plasticity

fracture mechanics creep seismology dynamic analysis probability and statistics damage that can affect concrete structures such as cracking of concrete and chloride ingress and rebar corrosion finite element formulation for both linear and nonlinear analysis including stress heat and fracture mechanics engineering models for soil fluid structure interaction uncertainty quantification probabilistic and random finite element analysis machine learning performance based earthquake engineering ground motion intensity measures seismic hazard analysis capacity fragility functions and damage indices applications to dams through potential failure mode analyses risk informed decision making deterministic and probabilistic examples applications to nuclear structures through modeling issues aging management programs critical review of some analyses other applications and case studies massive rc structures and bridges detailed assessment of a nuclear containment structure evaluation for license renewal this book should inspire students professionals and most importantly regulators to rigorously apply the most up to date scientific methods in the safety assessment of large concrete structures

the breadth of scientific and technological interests in the general topic of photochemistry is truly enormous and includes for example such diverse areas as microelectronics atmospheric chemistry organic synthesis non conventional photoimaging photosynthesis solar energy conversion polymer technologies and spectroscopy this specialist periodical report on photochemistry aims to provide an annual review of photo induced processes that have relevance to the above wide ranging academic and commercial disciplines and interests in chemistry physics biology and technology in order to provide easy access to this vast and varied literature each volume of photochemistry comprises sections concerned with photophysical processes in condensed phases organic aspects which are sub divided by chromophore type polymer photochemistry and photochemical aspects of solar energy conversion volume 34 covers literature published from july 2001 to june 2002 specialist periodical reports provide systematic and

detailed review coverage in major areas of chemical research compiled by teams of leading authorities in the relevant subject areas the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis

this affordable paperback course textbook has been adapted from the landmark four volume handbook of applied developmental science sage 2003 a work that offers a detailed roadmap for action and research in ensuring positive child youth and family development in 20 chapters applied developmental science an advanced textbook brings together the latest in theory and application from applied developmental science and the positive psychology movement this advanced text summarizes and synthesizes the best scientific knowledge from ads to help readers understand the efforts being made around the world to ensure that all children and adolescents develop into healthy adults

who contribute positively to society key features prominent researchers and practitioners offer state of the art overviews of key areas within the relatively new field of applied developmental science in consultation with instructors of applied developmental science and psychology courses chapters from the 4 volume handbook of applied developmental science sage 2003 have been selected that best match syllabi for such courses chapters end with conclusions offering students summaries and future directions along with references for further in depth reading this new single volume work will benefit students planning on careers working with children youth and families generally within an educational or community setting the text is also recommended for advanced undergraduate and beginning graduate students of psychology human development family studies social work human services education and related disciplines
