chapter 10 antennas and radiation mit opencourseware Jan 24 2024

an antenna is a device that couples currents to electromagnetic
waves for purposes of radiation or reception the process by which
antennas radiate can be easily understood in terms of the way in
which accelerating charged particles or time varying currents
radiate which is discussed in section 10 1

wireless transmissions propagate in three modes ground wave sky
wave and line of sight ground wave propagation follows the contour
of the earth while sky wave propagation uses reflection by both
earth and ionosphere finally line of sight propagation requires the
transmitting and receiving antennas to be within line of sight of
each other
