an enterprise architecture tries to describe and control an organisation s structure processes applications systems and techniques in an integrated way the unambiguous specification and description of components and their relationships in such an architecture requires a coherent architecture modelling language lankhorst and his co authors present such an enterprise modelling language that captures the complexity of architectural domains and their relations and allows the construction of integrated enterprise architecture models they provide architects with concrete instruments that

improve their architectural practice as this is not enough they additionally present techniques and heuristics for communicating with all relevant stakeholders about these architectures since an architecture model is useful not only for providing insight into the current or future situation but can also be used to evaluate the transition from as is to to be the authors also describe analysis methods for assessing both the qualitative impact of changes to an architecture and the quantitative aspects of architectures such as performance and cost issues the modelling language presented has been proven in practice in many real life case studies and has been adopted by the open group as an international standard so this book is an ideal companion for enterprise it or business architects in industry as well as for computer or management science students studying the field of enterprise architecture

based on the author s more than 25 years of teaching
experience modeling and analysis of stochastic
systems second edition covers the most important
classes of stochastic processes used in the modeling
of diverse systems from supply chains and inventory
systems to genetics and biological systems for each
class of stochastic process the text includes its
definition characterization applications transient and
limiting behavior first passage times and cost reward
models along with reorganizing the material this
edition revises and adds new exercises and examples
new to the second edition a new chapter on diffusion
processes that gives an accessible and non measure
theoretic treatment with applications to finance a
more streamlined application oriented approach to
renewal regenerative and markov regenerative
processes and two appendices that collect relevant
results from analysis and differential and difference
equations rather than offer special tricks that work in
specific problems this book provides thorough
coverage of general tools that enable the solution and

analysis of stochastic models after mastering the material in the text students will be well equipped to build and analyze useful stochastic models for various situations a collection of matlab registered based programs can be downloaded from the author s website and a solutions manual is available for qualifying instructors

the international conference on machine learning and data mining mldm is the third meeting in a series of biennial events which started in 1999 organized by the institute of computer vision and applied computer sciences ibai in leipzig mldm began as a workshop and is now a conference and has brought the topic of machine learning and data mining to the attention of

the research community seventy ve papers were submitted to the conference this year the program committee worked hard to select the most progressive research in a fair and competent review process which led to the acceptance of 33 papers for presentation at the conference the 33 papers in these proceedings cover a wide variety of topics related to machine learning and data mining the two invited talks deal with learning in case based reasoning and with mining for structural data the contributed papers can be grouped into nine areas support vector machines pattern discovery decision trees clustering classification and retrieval case based reasoning bayesian models and methods association rules and applications we would like to express our appreciation to the reviewers for their precise and highly professional work we are grateful to the german science foundation for its support of the eastern european researchers we appreciate the help and understanding of the editorial staff at springer verlag and in particular alfred hofmann who supported the publication of these proceedings in the series last but not least we wish to thank all the speakers and participants who contributed to the success of the conference
