funny heart warming and ultimately triumphant the seven imperfect rules of elvira carr by frances maynard is a story for anyone who doesn't quite fit in and for everyone who chooses not to perfect for fans of eleanor oliphant is completely fine wonderful rosie walsh author of the man who didn't call elvira carr is twenty seven neuro atypical and has never lived alone but her father who she suspects was in the secret service is dead and when her mother has a stroke and is taken into care elvira suddenly finds herself home alone in order to cope elvira who knows a lot about biscuits and supermarkets but not much about life develops seven rules for interacting with others not even her rules can help her however when she's faced with solving a mystery she didn't know existed big hearted and charming james hannah author of the a to z of you and me for use in schools and libraries only a socially challenged young woman is finally forced to find her place in the world nobody knows craps like mr joe in this groundbreaking book he shows you how to walk away from a crap table a winner his knowledge about the random numbers game we call craps is astonishing shortlisted for the lucy cavendish prize elvira carr believes in rules also crisp schedules no surprises and taking people at face value not that she sees many people her overbearing mother keeps the twenty seven year old mostly at home then her mother has a stroke suddenly on her own elvira ingeniously comes up with seven ironclad rules to guide her days and takes charge of herself an engrossing and evocative read jenny quintana captures layered atmosphere and complex emotions beautifully alongside writing a compulsive tale i loved it kate hamer author of crushed from the bestselling author of the missing girl and our dark secret comes the hiding place a story about identity love long buried secrets and lies a credible mystery intriguingly unravelled over two timelines that kept me guessing to the very end anita frank author of the lost ones some houses have their secrets but so do some people abandoned as a baby in the hallway of a shared house in london marina has never known her parents and the circumstances of her birth still remain a mystery now an adult marina has returned to the house where it all started determined to find out who she really is but the walls of this house hold more than memories and marina's reappearance hasn't gone unnoticed by the other tenants someone is watching marina someone who knows the truth aristotle was the founder not only of logic but also of modal logic in the prior analytics he developed a complex system of modal syllogistic which while influential has been disputed since antiquity and is today widely regarded as incoherent combining analytic rigor with keen sensitivity to historical context marko malink makes clear that the modal syllogistic forms a consistent integrated system of logic one that is closely related to other areas of aristotle's philosophy aristotle's modal syllogistic differs significantly from modern modal logic malink considers the key to understanding the aristotelian version to be the notion of predication discussed in the topics specifically its theory of predicables definition genus differentia proprium and accident and the ten categories substance quantity quality and so on the predicables introduce a distinction between essential and nonessential predication in contrast the categories distinguish between substantial and nonsubstantial predication malink builds on these insights in developing a semantics for aristotle's modal propositions one that verifies the ancient philosopher's claims of the validity and invalidity of modal inferences while it acknowledges some limitations of this reconstruction aristotle's modal syllogistic brims with bold ideas richly supported by close readings of the greek texts major approaches to law and public policy ranging from law and economics to the fundamental rights approach to constitutional law are based on the belief that the identification of the correct social goals or values is the key to describing or prescribing law and public policy outcomes in this book neil komesar argues that this emphasis on goal choice ignores an essential element institutional choice indeed as important as determining our social goals is deciding which institution is best equipped to implement them the market the political process or the adjudicative process pointing out that all three institutions are massive complex and imperfect komesar develops a strategy for comparative institutional analysis that assesses variations in institutional ability he then powerfully demonstrates the value of this analytical framework by using it to examine important contemporary issues ranging from tort reform to constitution making from their decades of combined teaching experience benjamin l merkle and robert l plummer have produced an ideal resource for novice greek students to not only learn the language but also kindle a passion for reading the greek new testament designed for those new to greek beginning with new testament greek is a user friendly textbook for elementary greek courses at the college or seminary level this book uses kant's idea of imperfect duty to extend the theory of the firm unlike perfect duty which is contractual or otherwise legally binding imperfect duty consists of those commitments of choice that pursue some moral value but that have practical limits to their pursuit the author presents a broad view of the imperfect duties of management defined as a nexus of all commitments to do good involving relations internal and external to the firm this nexus consists of three overlapping categories of i building a virtuous managerial community ii pursuing reasoned managerial discourse and iii diligent and reasoned pursuit of the body of routine managerial duties such as capital budgeting and internal controls specific applications of the nexus theory for stakeholder relations via fair negotiation and for analysis of the effects on the managerial team of perquisite consumption are presented this book has major implications for research in business ethics and allows critical insights into managerial decision making recognized as a choice outstanding academic title in 2011 many people complain about the complex system used to nominate presidents the system is hardly rational because it was never carefully planned because of the dissatisfaction over the idiosyncrasies of the current system periodic calls arise to reform the presidential nomination process but how are we to make sense of the myriad complexities in the

system as well as in the calls for change in the imperfect primary political scientist barbara norrander explores how presidential candidates are nominated discusses past and current proposals for reform and examines the possibility for more practical incremental changes to the electoral rules norrander reminds us to be careful what we wish for reforming the presidential nomination process is as complex as the current system through the modeling of empirical research to demonstrate how questions of biases can be systematically addressed students can better see the advantages disadvantages and potential for unintended consequences in a whole host of reform proposals in the quest for sustainability we strive to meet our present needs without sacrificing the same opportunity for future generations our success or failure depends on our ability to think in systems integrating environmental social and economic considerations but how do we learn systems thinking in a series of engaging rapid fire stories sustainability through soccer takes readers on a journey through a progression of systems thinking and sustainability concepts using the beautiful game of soccer as an analogy leidy klotz illuminates real world interdependencies such as between climate change and human rights building the chain of concepts in a fun accessible way soccer nerds and newbies alike will be entertained on the way to a deeper understanding of sustainability science dr atkinson s work has grown out of a deep satisfaction with the state of theorising in child language development critical analysis of superficially attractive theories showed that they had no real explanatory power yet no coherent framework had been proposed for evaluating theorising in this area a central tenet of this volume is that theories of language development should be relatable to some general view of human development and on this basis dr atkinson presents a number of conditions that any adequate theory of language development should satisfy the major theories in most areas of language acquisition in particular work in semantic syntactic and functional development are then systematically examined in the light of these conditions and found wanting in a final chapter the author relates his work to recent studies in the formal theory of learnability this scholarly critique should be read by anyone with a serious interest in the study of child language development and will undoubtedly have a singular impact on the field an introduction to business and management ethics provides an introduction to some of the major challenges facing anyone concerned with standards of behaviour in organizations it starts from a consideration of the resources provided by philosophical ethics and moves on to consider the challenges inherent in working in a competitive business environment the book gives straightforward guidance to students of business ethics and encourages the application of theory through the use of topical exercises and case studies the manuscript seville biblioteca colombina y capitular 5 2 25 a composite of dozens of theoretical treatises is one of the primary witnesses to late medieval music theory its numerous copies of significant texts have been the focus of substantial scholarly attention to date but the shorter unattributed or fragmentary works have not yet received the same scrutiny in this monograph cook demonstrates that a small group of such works linked to the otherwise unknown magister johannes pipudi is in fact much more noteworthy than previous scholarship has observed the not one but two copies of de arte cantus are in fact one of the earliest known sources for the libellus cantus mensurabilis purportedly by jean des murs and the most widely copied music theory treatise of its day while regulae contrapunctus nota quod novem sunt species contrapunctus and a concluding set of notes in catalan are early witnesses to the popular ars contrapuncti treatises also attributed to des murs disclosing newly discovered biographical information it is revealed that pipudi is most likely one johannes pipardi familiar to cardinal jean de blauzac vicar general of avignon cook provides the first biographical assessment for him and shows that late fourteenth century avignon was a plausible chronological and geographical milieu for the seville treatises hinting provocatively at a possible route of transmission for the libellus from paris to italy the monograph concludes with new transcriptions and the first english translations of the treatises spanish phonology and morphology serves as an introduction to both the formal study of spanish phonology and the framework of generative phonology pattern recognition prowess served our ancestors well but today we are confronted by a deluge of data that is far more abstract complicated and difficult to interpret the number of possible patterns that can be identified relative to the number that are genuinely useful has grown exponentially which means that the chances that a discovered pattern is useful is rapidly approaching zero patterns in data are often used as evidence but how can you tell if that evidence is worth believing we are hard wired to notice patterns and to think that the patterns we notice are meaningful streaks clusters and correlations are the norm not the exception our challenge is to overcome our inherited inclination to think that all patterns are significant as in this age of big data patterns are inevitable and usually coincidental through countless examples the phantom pattern problem is an engaging read that helps us avoid being duped by data tricked into worthless investing strategies or scared out of getting vaccinations this book introduces readers to critical ethical concerns in the development and use of artificial intelligence offering clear and accessible information on central concepts and debates in ai ethics it explores how related problems are now forcing us to address fundamental age old questions about human life value and meaning in addition the book shows how foundational and theoretical issues relate to concrete controversies with an emphasis on understanding how ethical questions play out in practice all topics are explored in depth with clear explanations of relevant debates in ethics and philosophy drawing on both historical and current sources questions in ai ethics are explored in the context of related issues in technology regulation society religion and culture to help readers gain a nuanced understanding of the scope of ai ethics within broader debates and concerns written with both students and educators in mind the book is easy to use with key terms clearly explained and numerous exercises designed to stretch and challenge it offers readers essential insights into the evolving field of ai ethics moreover it presents a range of methods and strategies that can be used to analyse and understand ethical questions which are illustrated throughout with case studies like it or not chance plays a big part in our lives every day we face situations where the result is uncertain and perhaps without realizing it we guess about the likelihood of one

outcome or another fortunately mastering the concepts of probability can cast new light on situations where randomness and chance appear to rule in this book which uses lotteries and casino games to provide the many illustrative examples the reader can learn about the world of probability the author demystifies the law of large numbers betting systems random walks the bootstrap rare events the central limit theorem the bayesian approach and more written with wit and clarity this book can be read easily by anyone who is not put off by a few numbers and some high school algebra it is also ideally suited to students of all disciplines taking their first course in probability a profound compelling argument for abolition feminism to protect criminalized survivors of gender based violence we must dismantle the carceral system since the 1970s anti violence advocates have worked to make the legal system more responsive to gender based violence but greater state intervention in cases of intimate partner violence rape sexual assault and trafficking has led to the arrest prosecution conviction and incarceration of victims particularly women of color and trans and gender nonconforming people imperfect victims argues that only dismantling the system will bring that punishment to an end amplifying the voices of survivors including her own clients abolitionist law professor leigh goodmark deftly guides readers on a step by step journey through the criminalization of survival abolition feminism reveals the possibility of a just world beyond the carceral state which is fundamentally unable to respond to let alone remedy harm as imperfect victims shows abolition feminism is the only politics and practice that can undo the indescribable damage inflicted on survivors by the very system purporting to protect them report and speeches at the third annual meeting of the church pastoral aid society may 8 1838 in her remarkable national bestseller necessary losses judith viorst explored how we are shaped by the various losses we experience throughout our lives now in her wise and perceptive new book imperfect control she shows us how our sense of self and all our important relationships are colored by our struggles over control over wanting it and taking it loving it and fearing it and figuring out when the time has come to surrender it writing with compassion acute psychological insight and a touch of her trademark humor viorst invites us to contemplate the limits and possibilities of our control she shows us how our lives can be shaped by our actions and our choices she reminds us too that we sometimes should choose to let go and she encourages us to find our own best balance between power and surrender
