this is the story of a texan this is a texas story we spell it big here  
 because it is a big story a big story about a man from texas a story about a  
 man who as a young boy saw what he wanted to do set out to do it and  
 accomplished his lifes ambition the mans name was cecil standefer the events  
 in this book primarily happened in texas between 1898 and 1981 he struggled  
 some had some personal losses and he overcame them he grew up in a time when  
 the united states of america grew to be recognized as a world power his part  
 in all that was that of a railroad employee and not just any employee as  
 cecil standefer was in engine service he was in engine service for the st  
 louis southwestern railway company and he was in this service for 50 years  
 cecil standefer wanted to become a locomotive engineer from the very first  
 time he ever saw a train he achieved his lifes ambition by becoming a cotton  
 belt engineer 19950000000000000000000000 0000 000000000000 0000000000000000000000

This textbook describes earth's plasma environment from single particle motion in electromagnetic fields with applications to earth's magnetosphere up to plasma wave generation and wave particle interaction the origin and effects of collisions and conductivities are discussed in detail as is the formation of the ionosphere the origin of magnetospheric convection and magnetospheric dynamics in solar wind magnetosphere coupling the evolution of magnetospheric storms auroral substorms and auroral phenomena of various kinds the second half of the book presents the theoretical foundation of space plasma physics from kinetic theory of plasma through the formation of moment equations and derivation of magnetohydrodynamic theory of plasmas the validity of this theory is elucidated and two fluid theory is presented in more detail this is followed by a brief analysis of fluid boundaries with earth's magnetopause and bow shock as examples the main emphasis is on the presentation of fluid and kinetic wave theory deriving the relevant wave modes in a high temperature space plasma plasma instability is the most important topic in all applications and is discussed separately including a section on thermal fluctuations these theories are applied to the most interesting problems in space plasma physics collisionless reconnection and collisionless shock waves with references provided the appendix includes the most recent developments in the theory of statistical particle distributions in space plasma the kappa distribution etc also including a section on space

plasma turbulence and emphasizing on new observational developments with a dimensional derivation of the kolmogorov spectrum which might be instructive for the student who may worry about its origin the book ends with a section on space climatology space meteorology and space weather a new application field in space plasma physics that is of vital interest when considering the possible hazards to civilization from space
