**Local Area Networks. Proceedings ; 1** 1982 discover the use of graph networks to develop a new approach to data science using theoretical and practical methods with this expert guide using python printed in color key featurescreate networks using data points and informationlearn to visualize and analyze networks to better understand communitiesexplore the use of network data in both supervised and unsupervised machine learning projectspurchase of the print or kindle book includes a free pdf ebookbook description network analysis is often taught with tiny or toy data sets leaving you with a limited scope of learning and practical usage network science with python helps you extract relevant data draw conclusions and build networks using industry standard practical data sets you ll begin by learning the basics of natural language processing network science and social network analysis then move on to programmatically building and analyzing networks you ll get a hands on understanding of the data source data extraction interaction with it and drawing insights from it this is a hands on book with theory grounding specific technical and mathematical details for future reference as you progress you ll learn to construct and clean networks conduct network analysis egocentric network analysis community detection and use network data with machine learning you ll also explore network analysis concepts from basics to an advanced level by the end of the book you ll be able to identify network data and use it to extract unconventional insights to comprehend the complex world around you what you will learnexplore nlp network science and social network analysisapply the tech stack used for nlp network science and analysisextract insights from nlp and network datagenerate personalized nlp and network projectsauthenticate and scrape tweets connections the web and data streamsdiscover the use of network data in machine learning projectswho this book is for network science with python demonstrates how programming and social science can be combined to find new insights data scientists nlp engineers software engineers social scientists and data science students will find this book useful an intermediate level of python programming is a prerequisite readers from both social science and programming backgrounds will find a new perspective and add a feather to their hat

*Network Science with Python* 2023-02-28 utilizes a hands on approach to designing and setting up a secure home wireless network discusses the preparation configuration and use of such networks and explains how to use the system to share files printer and internet connections

PC Mag 2008-03 since the turn of the 21st century the television series has

rivalled cinema as the paradigmatic filmic medium like few other genres it lends itself to exploring society in its different layers in the case of great britain and ireland it functions as a key medium in depicting the state of the nation focussing on questions of genre narrative form and serialisation this volume examines the variety of ways in which popular recent british and irish television series negotiate the concept of community as a key component of the state of the nation

Planning For Drought 2019-06-04 as the price of servers comes down to the level of desktop pcs many small and medium sized businesses are forced to provide their own server setup maintenance and support without the high dollar training enjoyed by their big corporation counterparts upgrading and repairing servers is the first line of defense for small and medium sized businesses and an excellent go to reference for the experienced administrators who have been asking for a reference guide like this one for a long time it s all here in one incredibly useful tome that you will refer to again and again inside is in depth coverage of server design and implementation building and deploying server hardware components network and backup operations san fault tolerance server racks server rooms server operating systems as well as sun microsystems servers no other computer hardware book has ever dared tackle this enormous topic until now

**Community, Seriality, and the State of the Nation: British and Irish Television Series in the 21st Century** 2019-02-18 the presentation of technology as a response to human want or need is a defining aspect of black mirror a series that centers the transhumanist conviction that ontological deficiency is a solvable problem the articles in this collection continue black mirror s examination of the transhuman need for plentitude addressing the convergence of fantasy the posthuman and the dramatization of fear the contributors contend that black mirror reveals both the cracks of the posthuman self and the formation of anxiety within fantasy s empty yet necessary economy of desire the strength of the series lies in its ability to disrupt the visibility of technology no longer portraying it as a naturalized unseen background affecting our very being at the ontological level without many of us realizing it this volume of essays argues that this negative lesson is black mirror s most successful approach it examines how black mirror demonstrates the janus like structure of fantasy as well as how it teaches unteaches and reteaches us about desire in a technological world

**Scientific and Technical Aerospace Reports** 1980 this book develops an original theoretical framework for understanding human technology relations the author s approach which he calls technoanalysis analyzes artificial intelligence based on freudian psychoanalysis biosemiotics and latour s actor network theory how can we communicate with ai to determine shared values and objectives and what ultimately do we want from machines these are crucial questions in our world where the influence of ai based technologies is rapidly growing unconscious dynamics influence ai and digital technology and understanding them is essential to better controlling ai systems this book s unique methodology which combines psychoanalysis biosemiotics and actor network theory reveals a radical reformulation of the problem of the human mind technoanalysis views the mind as a hybrid network of humans and nonhuman actants in constant interaction with one another the author argues that human unconscious dynamics influence and shape technology just as technology influences and shapes human unconscious dynamics he proceeds to show how this conception of the relationship between the unconscious and technology can be applied to social robotics and ai unconscious networks will appeal to scholars and advanced students interested in philosophy of technology philosophy of artificial intelligence psychoanalysis and science and technology studies
