learn math in a guided discovery format these teaching textbooks are designed to let students learn at their own pace summit math books are for curious students who want learning to feel like a journey the scenarios are arranged to show how new math concepts are related to previous concepts they have already learned students naturally learn at different paces and these books help teachers manage flexible pacing in their classes learn more at summitmathbooks.com topics in this book introduction to polynomials monomials binomials and trinomials adding polynomials subtracting polynomials multiplying polynomials part 1 writing polynomials in standard form multiplying polynomials part 2 multiplying binomials to form another binomial squaring a binomial to make a perfect square trinomial polynomial scenarios cumulative review answer key book description in this book students learn about polynomial expressions and then they use what they have learned about operations with numbers to discover how to add and subtract polynomials students use what they have already learned about the distributive property to discover how to multiply binomial and trinomial expressions they also investigate special cases that occur when multiplying binomials they explore cases where the product of two binomials is a binomial and they look for patterns that occur when a binomial is multiplied by itself this book prepares students to learn about factoring in algebra 1 book 5 student testimonials this is the best way to learn math summit math books are unlike typical textbooks it doesn't matter how you learn or what speed you go at you can learn at your own pace while still understanding all the material summit math books have guided me through algebra they are the stepping stones of what it takes to think like a mathematician i really enjoy learning from these books they clearly demonstrate how concepts

are built over other concepts you don't just memorize you actually understand it parent testimonials summit math books not only helped my daughter learn the math they helped her to love learning math in and of itself summit math books have a fun self-paced way to explain math concepts i am absolutely thrilled with this math program the books are so well organized and the content builds from one lesson to the next we are really impressed and grateful for our boys understanding of what the math means not just how to get problems right we should all learn to understand math this way as the mother of a teenage daughter who previously had occasional difficulty in math it was refreshing to watch her actually enjoy her math class and to understand the subject matter without struggling i have three kids that have used summit math using these books they have more freedom to learn and explore at their own pace during class with notes already incorporated within the book teacher testimonials summit math allows students to work at their own pace which allows me the opportunity to provide individualized attention to those who need it summit math emphasizes understanding concepts rather than memorizing rules students take ownership while acquiring the necessary skills to solve meaningful math problems it has been a real benefit having problem sets that are explicitly designed to guide students through the development of their understanding of the how and why behind the concepts they are studying see more testimonials at summitmathbooks.com
