~~this the most common test for dysarthria is called the frenchay more qualitative than~~  
quantitative presents problems in reliability which is really important in tests and assessments  
the largest reliability problem is inter judge reliability means how close will two or more  
clinicians judge the same client are the results similar and how similar to assess dysarthria you  
ll start with a case history and then evaluate cranial nerves speech production speech subsystems  
and non speech movements follow the 11 steps below then keep scrolling for help with differential  
diagnosis and finding norms neuropsychological tests these measure your thinking cognitive skills  
your ability to understand speech your ability to understand reading and writing and other skills  
dysarthria doesn t affect your cognitive skills and understanding of speech and writing but an  
underlying condition can more information treatment the frenchay dysarthria assessment second  
edition fda 2 includes new powerful knowledge about motor speech disorders and their contribution  
to neurological diagnosis this updated edition remains a well established test for the  
measurement differential description and diagnosis of dysarthria several assessment tools exist  
these include frenchay dysarthria assessment 2nd edition fda 2 enderby palmer 2008 dysarthria  
examination battery drummond 1993 dysarthria profile robertson 1982 and tests of intelligibility  
the test is divided into seven sections a reflexes b respiration c lips d palate e laryngeal f  
tongue and g intelligibility in addition the fda 2 includes a section on interpret your findings  
using the dysarthria differential diagnosis tool you will need a stopwatch a mirror a voice  
recorder and the cookie theft picture and or the caterpillar passage norms within 1 standard  
deviation of the norm is considered within normal limits dysarthria refers to a group of  
neurogenic speech disorders characterized by abnormalities in the strength speed range steadiness  
tone or accuracy of movements required for breathing phonatory resonatory articulatory or  
prosodic aspects of speech production duffy 2020 p 3 these changes are due to one or more  
sensorimotor this french language intelligibility test can be used to evaluate speech disorder  
for example in dysarthria head and neck cancer or after cochlear implantation 1 introduction
