returns disequilibrium outcomes and path dependency each chapter is introduced by empirical puzzles or historical episodes illuminated by the modeling that follows and the book closes with sets of problems to be solved by readers seeking to improve their mathematical modeling skills complementing standard mathematical analysis are agent based computer simulations of complex evolving systems that are available online so that readers can experiment with the models bowles concludes with the time honored challenge of getting the rules right providing an evaluation of markets states and communities as contrasting and yet sometimes synergistic structures of governance must reading for students and scholars not only in economics but across the behavioral sciences this engagingly
