international institutions from the international monetary fund to the international olympic committee are perceived as bastions of sclerotic mediocrity at best and outright corruption at worst and this perception is generally not far off the mark in the wake of the 2008 financial crash daniel w drezner like so many others looked at the smoking ruins of the global economy and wondered why global economic governance structure had failed so spectacularly and what could be done to reform them in the future but then a funny thing happened as he surveyed their actions in the wake of the crash he realized that the evidence pointed to the exact opposite conclusion global economic governance had succeeded in the system worked drezner a renowned political scientist and international relations expert contends that despite the massive scale and reverberations of this latest crisis larger arguably than those that precipitated the great depression the global economy has bounced back remarkably well examining the major resuscitation efforts by the g 20 imf wto and other institutions he shows that thanks to the efforts of central bankers and other policymakers the international response was sufficiently coordinated to prevent the crisis from becoming a full fledged depression yet the narrative about the failure of multilateral economic institutions persists both because the great recession affected powerful nations whose governments managed their own economies poorly and because the most influential policy analysts who write the books and articles on the crisis hail from those nations nevertheless drezner argues while it s true that the global economy is still fragile these institutions survived the stress test of the financial crisis and may have even become more resilient and valuable in the process bucking the conventional wisdom about the new g zero world drezner rehabilitates the image of the much maligned international institutions and demolishes some of the most dangerous myths about the financial crisis the system

begun in 2010 as part of the histories of literatures in european languages series sponsored by the international comparative literature association the current project on new literary hybrids in the age of multimedia expression recognizes the global shift toward the visual and the virtual in all areas of textuality the printed verbal text is increasingly joined with the visual often electronic text this shift has opened up new domains of human achievement in art and culture the international roster of 24 contributors to this volume pursue a broad range of issues under four sets of questions that allow a larger conversation to emerge both inside the volume s sections and between them the four sections cover 1 multimedia productions in theoretical and historical perspective 2 regional and intercultural projects 3 forms and genres and 4 readers and rewriters in multimedia environments the essays included in this volume are examples of the kinds of projects and inquiries that have become possible at the interface between literature and other media new and old they emphasize the extent to which hypertextual multimedia and virtual reality technologies have enhanced the sociality of reading and writing enabling more people to interact than ever before at the same time however they warn that as long as these technologies are used to reinforce old habits of reading writing they will deliver modest results one of the major tasks pursued by the contributors to this volume is to integrate literature in the global informational environment where it can function as an imaginative partner teaching its interpretive competencies to other components of the cultural landscape
