this book is a practical guide on how to design create and validate a spatial microsimulation model these models are becoming more popular as academics and policy makers recognise the value of place in research and policy making recent spatial microsimulation models have been used to analyse health and social disadvantage for small areas and to look at the effect of policy change for small areas this provides a powerful analysis tool for researchers and policy makers this book covers preparing the data for spatial microsimulation a number of methods for both static and dynamic spatial microsimulation models validation of the models to ensure the outputs are reasonable

and the future of spatial microsimulation the book will be an essential handbook for any researcher or policy maker looking to design and create a spatial microsimulation model this book will also be useful to those policy makers who are commissioning a spatial microsimulation model or looking to commission work using a spatial microsimulation model as it provides information on the different methods in a non technical way
