rehabilitation of attention after brain injury the brain injury interdisciplinary special interest group bi isig of the american congress of rehabilitation medicine has conducted evidence based reviews of the literature regard ing cognitive rehabilitation for persons with traumatic brain injury tbi or stroke impairments of attention are a major problem for people with stroke and affect rehabilitation outcome but the effectiveness of cognitive rehabilitation for attention is uncertain finding the best ways to improve cognition is a top 10 research priority for stroke survivors pollock 2012 intriguingly attention can be improved through cognitive rehabilitation this narrative review summarizes the essential elements of rehabilitation for attention problems in acute and post acute tbi we included randomised controlled trials rcts of cognitive rehabilitation for impairments of attention for people with stroke the primary outcome was measures of global attentional functions and secondary outcomes were measures of attention domains functional abilities mood and quality of life cognitive rehabilitation therapy refers to a group of treatments that help improve a person s ability to think after a brain injury or illness that affects the brain cognitive rehab therapy attentional impairments are a common focus of cognitive rehabilitation and increased awareness of evidence is needed to facilitate informed clinical practice methods this study evaluated in a large poststroke sample apt efficacy in improving performance on tests of attention and its impact on broader outcomes eg quality of life the primary aim was to determine if in stroke survivors identified with attention deficits apt would improve attention at in their updated meta analysis loetscher et al 48 examined 6 randomized controlled trials comparing cognitive rehabilitation with a standard care control group on outcomes of attention in tdc studies target symptoms included cognition n 2 attention n 3 memory n 3 working memory wm n 3 and executive function n 1 two of three studies showed significant improvement compared to the control group with respect to attention and memory our aim was to review the evidence about the effect of cognitive rehabilitation on attention the ability to perform daily activities mood and quality of life in people who have attention problems following a stroke this review analyses the evidence on the effects of cognitive attention rehabilitation in people with stroke the outcomes include the ability to perform daily activities mood and quality of life cognitive deficits following tbi are common and lead to significant disability and morbidity our review study highlights the effectiveness of rehabilitation in reducing the impact of brain injury related cognitive impairments novel techniques have emerged and are further evolving one of the most widely used cognitive rehabilitation programs is attention process training apt 1 which since it is based on the clinical model previously mentioned includes tasks targeting sustained attention selective attention divided attention and alternating attention and

uses auditory stimuli as well as pencil and paper 1 altmetric abstract disturbances of executive functions including the executive control of attention are recognized as among the most common persistent and debilitating consequences of traumatic brain injury tbi 1 6 objective comprehensive review of the use of computerized treatment as a rehabilitation tool for attention and executive function in adults aged 18 years or older who suffered an acquired brain injury disturbances of executive functions including the executive control of attention are recognized as among the most common persistent and debilitating consequences of traumatic brain injury tbi this chapter focuses on the application of empirically supported strategies for managing impairments of higher level attention and executive introduction moderate to severe traumatic brain injury ms tbi commonly causes disruption in aspects of attention due to its diffuse nature and injury to frontotemporal and midbrain reticular activating systems attentional impairments are a common focus of cognitive rehabilitation and increased awareness of evidence is needed to facilitate informed clinical practice methods an expert comprehensive review of the use of computerized treatment as a rehabilitation tool for attention and executive function in adults aged 18 years or older who suffered an acquired brain injury non obvious interactions among attentional systems the case of arousal and neglect analysing the cognitive architecture of spatial attention has so far suggested two types of rehabilitative process joint activation of mutually facilitatory networks and reduction of inhibitory competition these findings suggest that a combination of attention and tdcS may be an effective strategy to promote rehabilitation training in patients with stroke and neurodegenerative disorders trial registration retrospectively registered umin000036848

## **rehabilitation of attention after brain injury acrm Aug 21 2024**

rehabilitation of attention after brain injury the brain injury interdisciplinary special interest group bi isig of the american congress of rehabilitation medicine has conducted evidence based reviews of the literature regarding cognitive rehabilitation for persons with traumatic brain injury tbi or stroke

## **cognitive rehabilitation for attention deficits following stroke Jul 20 2024**

impairments of attention are a major problem for people with stroke and affect rehabilitation outcome but the effectiveness of cognitive rehabilitation for attention is uncertain finding the best ways to improve cognition is a top 10 research priority for stroke survivors pollock 2012

## **rehabilitation for impaired attention in the acute and post Jun 19 2024**

intriguingly attention can be improved through cognitive rehabilitation this narrative review summarizes the essential elements of rehabilitation for attention problems in acute and post acute tbi

## **cognitive rehabilitation for attention deficits following stroke May 18 2024**

we included randomised controlled trials rcts of cognitive rehabilitation for impairments of attention for people with stroke the primary outcome was measures of global attentional functions and secondary outcomes were measures of attention domains functional abilities mood and quality of life

## **cognitive rehabilitation therapy uses benefits and examples Apr 17 2024**

cognitive rehabilitation therapy refers to a group of treatments that help improve a person's ability to think after a brain injury or illness that affects the brain cognitive rehab therapy

## **incog 2 0 guidelines for cognitive rehabilitation following *Mar 16 2024***

attentional impairments are a common focus of cognitive rehabilitation and increased awareness of evidence is needed to facilitate informed clinical practice methods

## **reducing attention deficits after stroke using attention *Feb 15 2024***

this study evaluated in a large poststroke sample apt efficacy in improving performance on tests of attention and its impact on broader outcomes eg quality of life the primary aim was to determine if in stroke survivors identified with attention deficits apt would improve attention at

## **rehabilitation of cognitive deficits poststroke systematic *Jan 14 2024***

in their updated meta analysis loetscher et al 48 examined 6 randomized controlled trials comparing cognitive rehabilitation with a standard care control group on outcomes of attention

## **the effect of non invasive brain stimulation nibs on *Dec 13 2023***

in tdc studies target symptoms included cognition n 2 attention n 3 memory n 3 working memory wm n 3 and executive function n 1 two of three studies showed significant improvement compared to the control group with respect to attention and memory

## **cognitive rehabilitation for attention problems following *Nov 12 2023***

our aim was to review the evidence about the effect of cognitive rehabilitation on attention the ability to perform daily activities mood and quality of life in people who have attention problems following a stroke

## ***cognitive rehabilitation for attention deficits following stroke Oct 11 2023***

this review analyses the evidence on the effects of cognitive attention rehabilitation in people with stroke the outcomes include the ability to perform daily activities mood and quality of life

## ***cognitive impairment and rehabilitation strategies after Sep 10 2023***

cognitive deficits following tbi are common and lead to significant disability and morbidity our review study highlights the effectiveness of rehabilitation in reducing the impact of brain injury related cognitive impairments novel techniques have emerged and are further evolving

## ***sustained attention impairment and rehabilitation neuronup Aug 09 2023***

one of the most widely used cognitive rehabilitation programs is attention process training apt 1 which since it is based on the clinical model previously mentioned includes tasks targeting sustained attention selective attention divided attention and alternating attention and uses auditory stimuli as well as pencil and paper

## ***rehabilitation of attention and executive function impairments Jul 08 2023***

1 altmetric abstract disturbances of executive functions including the executive control of attention are recognized as among the most common persistent and debilitating consequences of traumatic brain injury tbi 1 6

## ***computerized cognitive rehabilitation of attention and Jun 07 2023***

objective comprehensive review of the use of computerized treatment as a rehabilitation tool for attention and executive function in adults aged 18 years or older who suffered an acquired brain injury

## **rehabilitation of attention and executive function impairments *May 06 2023***

disturbances of executive functions including the executive control of attention are recognized as among the most common persistent and debilitating consequences of traumatic brain injury tbi this chapter focuses on the application of empirically supported strategies for managing impairments of higher level attention and executive

## **incog 2 0 guidelines for cognitive rehabilitation following *Apr 05 2023***

introduction moderate to severe traumatic brain injury ms tbi commonly causes disruption in aspects of attention due to its diffuse nature and injury to frontotemporal and midbrain reticular activating systems attentional impairments are a common focus of cognitive rehabilitation and increased awareness of evidence is needed to facilitate informed clinical practice methods an expert

## **computerized cognitive rehabilitation of attention and *Mar 04 2023***

comprehensive review of the use of computerized treatment as a rehabilitation tool for attention and executive function in adults aged 18 years or older who suffered an acquired brain injury

## **cognitive rehabilitation attention and neglect trends in *Feb 03 2023***

non obvious interactions among attentional systems the case of arousal and neglect analysing the cognitive architecture of spatial attention has so far suggested two types of rehabilitative process joint activation of mutually facilitatory networks and reduction of inhibitory competition

## **transcranial direct current stimulation combined with *Jan 02 2023***

these findings suggest that a combination of attention and tdcS may be an effective strategy to promote rehabilitation training in patients with stroke and neurodegenerative disorders trial registration retrospectively registered
