the present volume contains the courses given at a summer school on magnetic phase transitions held at the etto majorana centre for scientific culture at erice trapani italy in july 1983 under the auspices of the condensed matter division of the european physical society in their series on materials science and technology the student participants came from west germany great britain brazil greece switzerland sweden italy usa and the netherlands the lecturers came from various european countries israel usa and canada the atmosphere at the meeting was excellent and a good spirit of companionship developed during two weeks of working together the spread of interests among the lecturers and students was diversified but balanced the main lecturing contributions are reported in this volume they represent up to date reviews in a pedagogical style in addition informal presentations on current research interests were made which have not been included the school attempted to summarize the current position on the properties of magnetic phase transitions from several points of view the range and scope of the theoretical techniques and of particular aspects of materials or phenomena as observed experimentally were very well put forward by the lecturers the grouping of manuscripts in chapters does not represent however the schedule followed during the school contributions on mean field approximations and renormalization group methods either for static or dynamic phenomena can be found at various places in the following sections

in the last two decades it was demonstrated that in addition to masses and charges magnetic moments of nuclei are able to influence remarkably chemical reactions this book presents the physical background both theoretical and experimental of the magnetic isotope effects in radical reactions in solutions special attention has been paid to the quantitative interpretation of the available experimental data this book will be useful for physicists chemists and biologists employing the isotope effect in their investigations as well as for those involved in isotope separation and isotope enrichment projects additionally the magnetic isotope effect appears to be important in geochemistry and cosmochemistry the book can be recommended for postgraduates and senior undergraduate students

dissociation of a dimer into two monomers and that of a trimer into a dimer and a monomer the observed velocity distribution for a beam of sodium iodide is shown in fig 23 the monomer and dimer distributions which are each of the form of eq 9 2 are separately shown the sum of the two assumed distributions is seen to agree with the experimental data the data for lithium bromide are shown in fig 24 the separate distributions for the monomer dimer and trimer required to fit the data are shown as is the sum of these distributions an attempt to describe the observed distribution in terms of a monomer and a dimer only is shown by the dotted line where the relative amounts of these species have been adjusted to give a fit on the low velocity side of the spectrum table 2 summary of data on the degree of association of diatomic molecules the data on the fluorides are from unpublished results of m eisenstadt g rothberg and p kusch uncertainties in  $\epsilon$  and  $\epsilon'$  are given in parentheses  $\epsilon'$   $\epsilon$  temperature ok i species at which  $\Delta H$  kcal/mole p 10 2mmhg rbcl 866 0 063 48 0 0 5 i kci 0 083 897 45 8 0 7 i ki 823 0 046 45 3 0 9 nac 920 0 259 44 6 0 9 i nai 817 0 235 38 6 3 4 lic 2
