much of what we are comes from our ancestors through cultural and biological inheritance mechanisms our genetic composition instructions for constructing artifacts the structure and content of languages and rules for behavior are passed from parents to children and from individual to individual mapping our ancestors demonstrates how various genealogical

or phylogenetic methods can be used both to answer questions about human history and to build evolutionary explanations for the shape of history anthropologists are increasingly turning to quantitative phylogenetic methods these methods depend on the transmission of information regardless of mode and as such are applicable to many anthropological questions in this way phylogenetic approaches have the potential for building bridges among the various subdisciplines of anthropology an exciting prospect indeed the structure of mapping our ancestors reflects the editors goal of developing a common understanding of the methods and conditions under which ancestral relations can be derived in a range of data classes of interest to anthropologists specifically this volume explores the degree to which patterns of ancestry can be determined from artifactual genetic linguistic and behavioral data and how processes such as selection transmission and geography impact the results of phylogenetic analyses mapping our ancestors provides a solid demonstration of the potential of phylogenetic methods for studying the evolutionary history of human populations using a variety of data sources and thus helps explain how cultural material language and biology came to be as they are carl p lipo is assistant professor of anthropology at california state university in long beach michael o brien is professor of anthropology and director of the museum of anthropology at the university of missouri mark collard is assistant professor of anthropology at the university of british columbia stephen j shennan is a professor and director of the institute of archaeology at the university college london niles eldredge is a curator in the department of invertebrates at the american museum of natural history and adjunct professor at the city university of new york

for more than a century scientists have raced to unravel the human family tree and have grappled with its complications now with an astonishing new discovery everything we thought we knew about primate origins could change lying inside a high security vault deep within the heart of one of the world s leading natural history museums is the scientific find of a lifetime a perfectly fossilized early primate older than the previously most famous primate fossil lucy by forty four million years a secret until now the fossil ida to theresearchers who have painstakingly verified her provenance is the most complete primate fossil ever found forty seven million years old ida rewrites what we ve assumed about the earliest primate origins her completeness is unparalleled so much of what we understand about evolution comes from partial fossils and even single bones but ida s fossilization offers much more than that from a haunting skin shadow to her stomach contents and remarkably knowledge of her discovery and existence almost never saw the light of day with exclusive access to the first scientiststo study her the award winning science writer colin tudge tells the history of ida and her place in the world a magnificent cutting edge scientific

detective story followed her discovery and the link offers a wide ranging investigation into ida and our earliest origins at the same time it opens a stunningly evocative window into our past and changes what we know about primate evolution and ultimately our own

the study of ancestor worship has an eminent pedigree in two disciplines social anthropology and folklore goody 1962 14 25 newell 1976 fortes 1976 takeda 1976 despite obvious differences in geographical specialization and intellectual orientation researchers in both fields have shared a common approach to this subject both have tried to relate the ancestor cult of a given society to its family and kin group organization such a method is to be expected of social anthropologists given the nature of their discipline but even the japanese folklorist yanagita kunio whose approach to folk culture stems from historical and nationalist concerns began his work on ancestors with a discussion of japan s descent system and family structure yanagita 1946 indeed connections between ancestor cults and social relations are obvious as we pursue this line of analysis we shall see that rural koreans themselves are quite sophisticated about such matters many studies of ancestor cults employ a combination of social and psychological approaches to explain the personality traits attributed to the dead by their living kin particular attention has long been given to explaining the hostile or punitive character of the deceased in many societies freud 1950 opler 1936 gough 1958 fortes 1965 only recently however has the popularity of such beliefs been recognized in china korea and japan ahern 1973 a wolf 1974b kendall 1977 1979 yoshida 1967 kerner 1976 lebra 1976 the earliest and most influential studies of ancestor cults in east asia produced by native scholars hozumi 1913 yanagita 1946 hsu 1948 overemphasize the benign and protective qualities of ancestors some regional variations notwithstanding this earlier bias appears to reflect a general east asian reluctance to acknowledge instances of ancestral affliction such reticence is not found in all societies with ancestor cults however nor in korea china and japan is it equally prevalent among men and women therefore we seek not only to identify the social experiences that give rise to beliefs in ancestral hostility but to explain the concomitant reluctance to acknowledge these beliefs and its varying intensity throughout east asia in view of the limited amount of ethnographic data available from korea we have not attempted a comprehensive assessment of the ancestor cult in korean society instead we have kept our focus on a single kin group we have drawn on data from other communities however in order to separate what is apparently true of korea in general from what may be peculiar to communities like twisongdwi a village of about three hundred persons that was the site of our fieldwork in this task we benefited substantially from three excellent studies of korean ancestor worship and lineage organization lee kwang kyu 1977a choi jai seuk 1966a kim taik kyoo 1964 and from two recent accounts of korean folk religion and ideology dix 1977 kendall 1979 yet we are still a long way from a comprehensive understanding of how korean beliefs and practices have changed over time correlate with different levels of class status or are affected by regional variations in korean culture and social organization because we want to provide a monograph accessible to a rather diverse readership we avoid using korean words and disciplinary terminology whenever possible where a korean term is particularly important we give it in parentheses immediately after its english translation korean alphabet orthographies for these words appear in the character list with chinese character equivalents for terms of chinese derivation as for disciplinary terminology we have adopted only the anthropological term lineage which is of central importance to our study we use lineage to denote an organized group of persons linked through exclusively male ties agnatically to an ancestor who lived at least four generations ago
