The New Normal

amitai etzioni argues that societies must find a way to balance individual rights and the common good this point of balance may change as new technologies develop the natural and international environments change and new social forces arise some believe the united states may be unduly shortchanging individual rights that need to be better protected specifically should the press be granted more protection or should its ability to publish state secrets be limited should surveillance of americans and others be curtailed should american terrorists be treated differently from others how one answers these questions etzioni shows invites a larger fundamental question where is the proper point of balance between rights and security etzioni implements the social philosophy liberal communitarianism its key assumptions are that neither individual rights nor the common good should be privileged that both are core values and that a balance is necessary between them etzioni argues that we need to find a new balance between our desire for more goods services and affluence particularly because economic growth may continue to be slow and jobs anemic the key question is what makes a good life especially for those whose basic needs are sated

Interpreting the Constitution

2015-11-04

this third volume about legal interpretation focuses on the interpretation of a constitution most specifically that of the united states of america in what may be unique it combines a generalized account of various claims and possibilities with an examination of major domains of american constitutional law this demonstrates convincingly that the book s major themes not only can be supported by individual examples but are undeniably in accord with the continuing practice of the united states supreme court over time and cannot be dismissed as misguided the book s central thesis is that strategies of constitutional interpretation cannot be simple that judges must take account of multiple factors not systematically reducible to any clear ordering for any constitution that lasts over centuries and is hard to amend original understanding cannot be completely determinative to discern what that is both how informed readers grasped a provision and what were the enactors aims matter indeed distinguishing these is usually extremely difficult and often neither is really discernible as time passes what modern citizens understand becomes important diminishing the significance of original understanding simple versions of textualist originalism neither reflect what has taken place nor is really supportable the focus on specific provisions shows among other things the obstacles to discerning original understanding and why the original sense of proper interpretation should itself carry importance for applying the bill of rights to states conceptions conceived when the fourteenth amendment was adopted

should take priority over those in 1791 but practically for courts to interpret provisions differently for the federal and state governments would be highly unwise the scope of various provisions such as those regarding free speech and cruel and unusual punishment have expanded hugely since both 1791 and 1865 and questions such as how much deference judges should accord the political branches depend greatly on what provisions and issues are involved even with respect to single provisions such as the free speech clause interpretive approaches have sensibly varied greatly depending on the more particular subjects involved how much deference judges should accord political actors also depends critically on the kind of issue involved

Evolving Ourselves

2015-03-10

we are the primary drivers of change we will directly and indirectly determine what lives what dies where and when we are in a different phase of evolution the future of life is now in our hands why are rates of conditions like autism asthma obesity and allergies exploding at an unprecedented pace why are humans living longer getting smarter and having far fewer kids how might your lifestyle affect your unborn children and grandchildren how will gene editing technologies like crispr steer the course of human evolution if darwin were alive today how would he explain this new world could our progeny eventually become a different species or several in evolving ourselves futurist juan Enriquez and scientist Steve Gullans conduct a sweeping tour of how humans are changing the course of evolution sometimes intentionally sometimes not for example globally rates of obesity in humans nearly doubled between 1980 and 2014 what s more there s evidence that other species from pasture fed horses to lab animals to house cats are also getting fatter as reported by u s government agencies the rate of autism rose by 131 percent from 2001 to 2010 an increase that cannot be attributed simply to increases in diagnosis rates three hundred years ago almost no one with a serious nut allergy lived long enough to reproduce today despite an environment in which food allergies have increased by 50 percent in just over a decade 17 million americans who suffer from food allergies survive thrive and pass their genes and behaviors on to the next generation in the pre twinkie era early humans had quite healthy mouths as we began cooking bathing and using antibiotics the bacteria in our bodies changed dramatically and became far less diverse today the consequences are evident not only in our teeth but throughout our bodies and minds though these harbingers of change are deeply unsettling the authors argue that we are also in an epoch of tremendous opportunity new advances in biotechnology help us mitigate the cruel forces of natural selection from saving prematurely born babies to gene therapies for sickle cell anemia and other conditions as technology like crispr enables us to take control of our genes we will be able to alter our own species and many others a good thing given that our eventual survival will require space travel and colonization enabled by a fundamental redesign of our bodies future humans could become great caretakers of the planet as well as a more diverse more resilient gentler and more intelligent species but only if we make the right choices now intelligent provocative and optimistic evolving ourselves is the ultimate guide to the next phase of life on earth
