the popularity of the internet and the affordability of it hardware and software have resulted in an explosion of applications architectures and platforms workloads have changed many applications including mission critical ones are deployed on a variety of platforms and the system z design has adapted to this change it takes into account a wide range of factors including compatibility and investment protection to match the it requirements of an enterprise this ibm redbooks publication discusses the ibm zenterprise system an ibm scalable mainframe server ibm is taking a revolutionary approach by integrating separate platforms under the well proven system z hardware management capabilities while extending system z qualities of service to those platforms the zenterprise system consists of the ibm zenterprise 114 central processor complex the ibm zenterprise unified resource manager and the ibm zenterprise bladecenter extension the z114 is designed with improved scalability performance security resiliency availability and virtualization the z114 provides up to 18 improvement in uniprocessor speed and up to a 12 increase in total system capacity for z os z vm and linux on system z over the z10tm business class bc the zbx infrastructure works with the z114 to enhance system z virtualization and management through an integrated hardware platform that spans mainframe power7tm and system x technologies the federated capacity from multiple architectures of the zenterprise system is managed as a single pool of resources integrating system and workload management across the environment through the unified resource manager this book provides an overview of the zenterprise system and its functions features and associated software support greater detail is offered in areas relevant to technical planning this book is intended for systems engineers consultants planners and anyone wanting to understand the zenterprise system functions and plan for their usage it is not intended as an introduction to mainframes readers are expected to be generally familiar with existing ibm system z technology and terminology

the response of civil engineering works to earthquakes is the only real and conclusive proof of their adequacy or otherwise however earthquakes as natural geological phenomena are few and far between which is fortunate from a human point of view therefore drawing important lessons from each and every earthquake is vital for improving the understanding of their effects and consequently for mitigating the effects of future earthquakes it is in this context that this volume has been written where a number of distinguished and internationally renowned earthquake engineers make contributions largely based on lessons from recent earthquakes in particular studies of the kobe earthquake of 1995 and the more recent devastating earthquakes in turkey and greece august and september 1999 respectively are included through assimilation of the lessons learnt and dissemination of this information it is hoped that future earthquakes will not exact such a heavy toll contents recent earthquakes observations from two recent earthquakes kocaali turkey and mt parnes greece damage of bridges in the 1999 kocaali turkey and chi chi taiwan earthquakes vulnerability functions for japanese buildings based on damage data from the 1995 kobe earthquake engineering seismology and geotechnics modelling of stress strain relationships of a reconstituted gravel subjected to large cyclic loading the feasibility of using real accelerograms for seismic design elaboration of a ssi macro element with uplift of shallow foundation structural earthquake engineering experimental studies of the response of hollow bridge piers a transparent nonlinear method for seismic performance evaluation an
