World Economic Outlook, October 2017 2017-10-10 the global upswing in economic activity is strengthening global growth which in 2016 was the weakest since the global financial crisis at 3 2 percent is projected to rise to 3 6 percent in 2017 and to 3 7 percent in 2018 the growth forecasts for both 2017 and 2018 are 0.1 percentage point stronger compared with projections earlier this year broad based upward revisions in the euro area japan emerging asia emerging europe and russia where growth outcomes in the first half of 2017 were better than expected more than offset downward revisions for the united states and the united kingdom but the recovery is not complete while the baseline outlook is strengthening growth remains weak in many countries and inflation is below target in most advanced economies commodity exporters especially of fuel are particularly hard hit as their adjustment to a sharp step down in foreign earnings continues and while short term risks are broadly balanced medium term risks are still tilted to the downside the welcome cyclical pickup in global activity thus provides an ideal window of opportunity to tackle the key policy challenges namely to boost potential output while ensuring its benefits are broadly shared and to build resilience against downside risks a renewed multilateral effort is also needed to tackle the common challenges of an integrated global economy

Economic Benefits of Export Diversification in Small States 2018-04-11 the paper considers concepts of economic diversification with respect to exports including service

sectors for small states we assessed the economic performance of different groups of 34 small states over the period of 1990 2015 and found those more diversified experienced lower output volatility and higher average growth than most other small states our findings are consistent with conventional economic theories but we found that export diversification has a more significant impact on reducing output volatility than improving long run growth in small states diversification requires fundamental changes and should be contemplated in the context of a cohesive development strategy

The Political and Economic Dynamics of the Eurozone **Crisis** 2016 the book is distinguished from existing research by its avoidance and rejection of the too often simplistic analysis that has characterized political media and regrettably some academic coverage and by its attempt to escape from the tyranny of day to day events and short term developments each of the contributors identifies an important question and undertakes a careful empirical theoretically informed analysis that produces novel perspectives together they seek to balance many of the existing accounts that have rushed to sometimes unwarranted conclusions concerning for example the locus of institutional power in european crisis management the power and centrality of particular member states notably germany which has been attributed with hegemonic status the supposed entrapment of eu policy makers by an austerity ideology and the deep flaws that apparently afflict the solutions to the crisis put painstakingly in place such as banking union
