the gut not only represents the largest endocrine organ of the human

body but is also profoundly involved in the control of metabolism through peptide hormones therefore gastrointestinal hormones are acting via autocrine paracrine and classical endocrine pathways and regulate e g digestion hunger and satiety furthermore they are important regulators of body weight growth and glucose metabolism as well as of mood and behavior physicians and scientists in the field of pediatric endocrinology and diabetes as well as in pediatric gastroenterology require an extensive understanding of the origin of enteroendocrine cells factors controlling their differentiation hormone gene expression secretion function and finally the complex interaction with other organs especially the central nervous system in order to meet these needs experts in the field have written up to date comprehensive and illustrated reviews presenting the current knowledge in the field of gastrointestinal endocrinology with a pediatric view those reviews comprise this latest volume of endocrine development
