This is a print on demand edition of a hard to find publication. This manual takes environmental health professionals and housing managers, specialists, and inspectors through the elements of a holistic home inspection. Section 1: The Healthy Housing Model Resident Questionnaire should be completed first to collect info that cannot be determined visually. Section 2: The Visual Assessment Data Collection Form should be used to collect info that can be determined without asking questions of a resident. This form includes detailed assessment of exterior housing, kitchen, bathroom, and living area, as well as a general building info. A useful reference tool for nurses, outreach workers, and others who are interested in preventing illness and injury due to residential health and safety hazards. Illustrations.

# The Ultimate Self-Sufficiency Manual 2021-06-15

based on data from six houses and one office building temperatures in walls and roofs can rise appreciably above the air temperature maximum values in walls may occasionally exceed 130 f but the cumulative duration of temperatures of 120 f or higher was not observed to exceed 32 hours in any one year maximum values in roofs can reach 170 f but cumulative durations of temperatures of 160 f or higher were not observed to exceed 21 hours or of 150 f or higher to exceed 64 hours in any one year roof temperatures in a house at madison wis fell as low as the air temperatures which were below 10 f for short periods in winter temperatures reached are affected by the orientation and the surface characteristics of the wall or roof as well as by the exterior climate the study points out the value of ventilation and insulation of roof areas and the value of roof overhang in controlling wall temperatures
