mobilizing knowledge in physiotherapy critical reflections on
foundations and practices is a collection of 15
collaboratively written critical essays by 39 authors from 15
disciplines and seven countries the book challenges some of
the most important contemporary assumptions about
physiotherapy knowledge and makes the case for much more
critical theory practice and education in physiotherapy
health and social care the book challenges the kinds of
thinking that have traditionally bounded the profession and
highlights the ways in which knowledge is now increasingly
fluid complex and diffuse the collection engages a range of
critical social theories and interdisciplinary perspectives
from within and without the profession it includes sections
focusing on evidence practice patient perspectives embodiment
culture diversity digital worlds and research methods the
book makes an important contribution to how we think about
mobilizing knowledge and it speaks to a diverse audience of
academics practitioners educators policy makers and students
both within physiotherapy and from a range of related health
and social care disciplines this book will be a useful
reference for scholars interested in conceptions of
professional knowledge and the theory of professional
education and practice in physiotherapy and beyond during the
past decade there has been a considerable expansion in the
understanding assessment and treatment of critically ill
patients an attempt to portray our present knowledge of this
diverse field in a comprehensive textbook is therefore a
formidable and daunting undertaking however many colleagues
in different disciplines and from different countries
convinced us of the need for such a work and greatly
encouraged by their interest we embarked upon the project any
single text even a very long one cannot cover every aspect of
critical illness our first task was therefore to define those
areas of the subject that had to be included this we did on a
systematic basis and although the final emphasis of the book
is very largely directed to clinical matters we felt it
pertinent to include in some detail accounts of relevant
and technology care the critically ill patients

during the past decade there has been a considerable expansion in the understanding assessment and treatment of critically ill patients an attempt to portray our present knowledge of this diverse field in a comprehensive textbook is therefore a formidable and daunting undertaking however many colleagues in different disciplines and from different

countries convinced us of the need for such a work and greatly encouraged by their interest we embarked upon the project any single text even a very long one cannot cover every aspect of critical illness our first task was therefore to define those areas of the subject that had to be included this we did on a systematic basis and although the final emphasis of the book is very largely directed to clinical matters we felt it pertinent to include in some detail accounts of relevant physiology and technology care of the critically ill patient is divided into twelve sections each concerned with major facets of critical illness each of the sixty eight chapters includes a topical and often extensive bibliography the many chosen contributors form an international group of specialists whose combined expertise embraces the topics that we have selected
