it is difficult to find an area of public policy more plagued by misunderstanding than energy policy even worse every time the subject is raised we are obligated to get mired in pointless arguments about the weather this book helps set the record straight not convinced consider some of these inconvenient truths the cost of green energy climate remediation is anywhere from 10 to 1 000 times greater than the damage from the climate change it attempts to alleviate germany the world s leader in solar energy will spend more than 280 billion by 2030 on solar subsidies but all of that investment will only forestall 22nd century global warming by 37 hours obama s carbon tax would cost americans 1 2 trillion over just ten years but it would only reduce the midrange 3 degree modeled 22nd century global temperature increase by 0 038 degrees celsius at their current emissions growth rate it will take china nine months to replace the entire u s emissions cut that obama wants to achieve over seven years at a staggering cost in american jobs and lost economic growth the u s biofuel program imposes a cost on consumers 9 862 times greater than any climate benefit they or their distant progeny will ever derive this is not another skeptical global warming polemic but an economic evaluation of how and why green energy will fail the world has too many pressing needs for the money obama squandered on just a single bankrupt crony solar company the u s could have prevented 300 000 childhood malaria deaths in poor countries a thoroughly researched heavily documented book by an expert in his field it will demonstrate in meticulous detail how wasteful and economically inefficient obama s green energy dead end future will be compared to other worthy alternatives it s time to end the hysterical climate cynicism and get on humanity s side
