excerpt from manual and diagrams to accompany metcalf s grammars it is well recognized by most educators that the diagramming of sentences is of no value to pupils in enabling them to perceive the relationships of the component words and phrases its only value being to represent these relationships but the inclusion of many diagrams in a pupil s text book is not to be commended for several reasons they occupy much space that might be devoted more profitably to other matter they are mechanical and superficial rather than fundamental they tend to emphasize unduly the importance of analysis to the teacher however the diagram is useful since it enables him to determine at a glance and without reading every word of an exercise or examination paper whether a pupil comprehends a sentence and realizes the interrelations of its several parts the diagram is therefore merely a valuable schoolroom device and a great saver of the teacher s time the widespread adoption of metcalf s grammars has brought them into the hands of many teachers who appreciate the true value of the diagram as a teachers aid and has led to a demand for this teacher s manual to accompany the metcalf series about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

this volume's goal is to provide readers with up to date information on the research and theory of scientific text comprehension it is widely acknowledged that the comprehension of science and technological artifacts is very difficult for both children and adults the material is conceptually complex there is very little background knowledge for most individuals and the materials are often poorly written therefore it is no surprise that students are turned off from learning science and technology given these challenges it is important to design scientific text in a fashion that fits the cognitive constraints of the learner the enterprise of textbook design needs to be effectively integrated with research in discourse processing educational technology and cognitive science this book takes a major step in promoting such an integration this volume provides an important integration of research and theory with theoretical methodological and educational applications includes a number of chapters that cover how science text information affects mental representations and strategies introduces important suggestions about how text design and new technologies can be thought of as pedagogical features and establishes academic text taxonomies and a consensus of the criteria to organize inferences and other mental mechanisms
