The Modern Land-grant University 2014 in an increasingly competitive higher education environment america's public universities are seeking ways to differentiate themselves this book suggests that a hopeful vision of what a university should be lies in a reexamination of the land grant mission the common system of values originally set forth in the morrill land grant acts of 1862 and 1890 which established a new system of practically oriented higher learning across the united states while hard to define these values are often expressed by the one hundred or so institutions that currently define themselves as land grants under the three pillars of research teaching and engagement extension in order to understand the unique character of a modern land grant institution this book focuses especially but not exclusively on the multiple components of a single organization oklahoma state university founded in 1890 and currently enrolling 35 000 students across five campuses contributors from across the university focus on what the land grant mission means to them in their daily endeavors whether that be crafting the undergraduate academic experience stimulating research or engaging with the community through extension activities the twenty contributions are divided into four parts exploring in turn the core mission of the modern land grant university the university environment the university's public value and its accountability the volume ends with an epilogue by the editor which summarizes the values underlying the activities of land grant institutions in a time of uncertainty in higher education this volume provides a helpful overview of the many different types of value public universities bring to american society it also offers a powerful vision of a future founded on land grant ideas that will be inspiring to university administrators and trustees other educational policymakers and faculty and staff especially those fortunate enough to be part of land grant institutions

Towards a Political Theory of the University 2016-11-25 towards a political theory of the university argues that state and market forces threaten to diminish the legitimacy authority and fundamental purposes of higher education systems the political role of higher education has been insufficiently addressed by academics in recent decades by applying habermas theory of communicative action this book seeks to reconnect educational and political theory and provide an analysis of the university which complements the recent focus on the intersections between political philosophy and legal theory in this book white argues that there is considerable overlap between crises in democracy and in universities yet while crises in democracy are often attributed to the inability of political institutions to adapt to the pace of social and cultural change this diagnosis wilfully ignores the effects of privatisation on public institutions under present political conditions the university is regarded in instrumental and economic terms which not only diminishes its functions of developing and sustaining culture but also removes its democratic capabilities this book explores these issues in depth and presents some of the practical problems associated with turning an independent higher education system into a state dominated and then subsequently marketised system this book bridges political and educational theory in an original and comprehensive way and makes an important contribution to the debate over the role of the university in a democracy as such it will appeal to researchers academics and postgraduate students in the fields of the philosophy of education higher education and political and educational theory with its implications for policy and practice it will also be of interest to policy makers

Programming Multi-Agents Systems 2012-07-13 the core thesis of this book is that to understand the implications of incentive structures in modern higher education we require a deeper understanding of associated issues in the philosophy of science significant public and philanthropic resources are directed towards various forms of research in the hope of addressing key societal problems that view and the associated allocation of resources relies on the assumption that academic research will tend towards finding truth or at least selecting the best approximations of it the present book builds on and extends contributions in philosophy and higher education to argue that this assumption is misplaced with serious implications for modern

higher education and its role in informing societal decisions and government policy the book develops a philosophical foundation for the analysis of the connection between higher education incentives scientific progress and societal outcomes that in turn is used to demonstrate how the current approach to incentivising intellectual and scientific progress is likely not only to fail but in fact to cause harm on the very dimensions it purports to improve the arguments presented are illustrated with examples from medicine and academic economics making the book one of the first to examine issues of scientific progress and social consequences across the human and social sciences in doing so it develops a novel critique of modern economics that in turn provides a more philosophically substantive foundation for popular critiques of economics than has existed to date
