people pursue their own interests whatever those interests might be some people have interests that are narrow and selfish while others have interests that are broad and altruistic the idea that people are self interested underpins all of economic analysis and raises two fundamental questions 1 how do people choose the actions they think will further their own interests 2 can the potentially conflicting interests of different people be made to mesh in some sort of socio economic equilibrium this book is devoted to a detailed study of the first question its companion volume economy wide microeconomics equilibrium optimality applications and tests makes a detailed study of the second question following some foundational remarks this book studies the arrow debreu theory of consumer choice that theory supposes people choose so as to maximize a complete continuous transitive and reflexive binary preference relation over a non empty and compact choice set the book then studies numerous refinements generalizations and extensions of each of these restrictions up to and including recent work on behavioral theories of choice and choice behaviour when preferences are intransitive incomplete discontinuous also considered is choice behaviour in environments that are not necessarily compact a study is also made of intertemporal choice and choice under uncertainty the study of arrow debreu choice theory and its extensions are presented from the primal dual and revealed preference points of view consumers are not the only agents in the economy as producers are present as well beginning with a study of the arrow debreu idea that producers choose from a convex production set so as to maximize profit the book considers extensions and generalizations of this framework

particularly to non convex environments the study is presented from the primal and dual points of view the final chapter in the book provides a link to its companion volume the chapter indicates how the theories of consumer and producer choice studied here help inform answers of the second question posed above resources are available to instructors who adopt this book more details at worldscientific com worldscibooks 10 1142 12789 sm

when i was in my class 12th i chose economics as a subject it s a beautiful subject with intricate concepts and i thoroughly loved it but there was a problem i had to read through 569 pages of the book to understand the concepts but only about 100 of those pages were relevant so i made notes of these concepts for exam purpose after the exams these notes lay gathering dust on my shelf and when i got selected in university of manchester for economics i realised how much knowledge lays buried in our shelves and how much time it will take another student to make the same notes why not form it in a book for ready reference of all those students who are taking the isc board this year presenting to you all theeconomicsguide roadtoboard which is a compendium of ready made notes of microeconomics for class 12th no need to shift through hundreds of pages of filler material no need to spend hours to make notes from the book all of this is ready for you at this link it s time to study smart and spend your worthy time more productively do share with your friends and family who are giving the board exams

these notes are based on the microeconomics lectures delivered in the master of science in applied economics msae programme at the city university of hong kong they have been delivered in the fall

semesters of 2005 2007 the lectures are delivered over a period of thirteen weeks three hours per week one should always remember the time constraint involved in delivering lectures everything can not be covered therefore one has to be selective in what is taught this is the reason for calling these lectures core microeconomics the topics selected and taught reflect our perceptions and value judgement about core topics in microeconomics also the students in this class at the city university of hong kong come from a very heterogeneous background which varies a lot medicine law mathematics engineering physics biology and of course economics the course is designed to teach all these heterogeneous students important topics in microeconomics in a span of thirteen weeks this is a tough task and many of these students are very ambitious and desirous of doing graduate studies in europe canada and the us the feedback on this course has been extremely good from students who are pursuing graduate studies in britain and the us these are lecture notes that vary in level at which different topics are taught and also the depth at which these topics are covered they should not be taken as a substitute for a textbook but as an aid for reading other textbooks
