an inviting intuitive and visual exploration of differential geometry and forms visual differential geometry and forms fulfills two principal goals in the first four acts tristan needham puts the geometry back into differential geometry using 235 hand drawn diagrams needham deploys newton s geometrical methods to provide geometrical explanations of the classical results in the fifth act he offers the first undergraduate introduction to differential forms that treats advanced topics in an intuitive and geometrical manner unique features of the first four acts include four distinct geometrical proofs of the fundamentally important global gauss bonnet theorem providing a stunning link between local geometry and global topology a simple geometrical proof of gauss s famous theorema egregium a complete geometrical treatment of the riemann curvature tensor of an n manifold and a detailed geometrical treatment of einstein s field equation describing gravity as curved spacetime general relativity together with its implications for gravitational waves black holes and cosmology the final act elucidates such topics as the unification of all the integral theorems of vector calculus the elegant reformulation of maxwell s equations of electromagnetism in terms of 2 forms de rham cohomology differential geometry via cartan s method of moving frames and the calculation of the riemann tensor using curvature 2 forms six of the seven chapters of act v can be read completely independently from the rest of the book requiring only basic calculus and geometry visual differential geometry and forms provocatively rethinks the way this important area of mathematics should be considered and taught

1994

distributed computing paradigms for sharing resources such as clouds grids peer to peer systems or voluntary computing are becoming increasingly popular while there are some success stories such as planetlab onelab boinc bittorrent and seti home a widespread use of these technologies for business applications has not yet been achieved in a business environment mechanisms are needed to provide incentives to potential users for participating in such networks these mechanisms may range from simple non monetary access rights monetary payments to specific policies for sharing although a few models for a framework have been discussed in the general area of a grid economy none of these models has yet been realised in practice this book attempts to fill this gap by discussing the reasons for such limited take up and exploring incentive mechanisms for resource sharing in distributed systems the purpose of this book is to identify research challenges in successfully using and deploying resource sharing strategies in open source and commercial distributed systems
